#### NAGPUR DIVISION.

Nagpur Division.—The southern Division of the Central Provinces, extending from 18° 42′ to 22° 24′ N. and 78° 3′ to 81° 3′ E. The Division consists of a large plain lying along the southern base of the Satpura hill ranges and comprised in the valleys of the Wardha and Wainganga rivers, with a long strip of hilly country on the eastern border. The

Nágpur Division includes five Districts as shown below:-

NAGPUR DIVISION:

Of these Wardha and Nagpur in the valley of the Wardhá on the west, with shallow black soil and a light rainfall, constitute the most important cotton-growing tract in the Province, while Bhandara and parts of Chanda and Balaghat in the valley of the Wainganga have been named the lake country of Nagpur, owing to the number of fine tanks constructed for the irrigation of rice. To the north of Balaghat and down the eastern side of Chanda stretch lines of hills approaching the Godávari river in the extreme south of the The headquarters of the Commissioner are at Province. NAGPUR CITY. The population of the Division was 2,758,116 in 1881, and increased to 2,982,589 in 1891 or by 8 per cent., the decade having been generally prosperous. At the last census the population had decreased to 2,728,063 or by 81 per cent., the principal losses being in the eastern or rice

The District figures of arcs and population have been adjusted to allow for some changes of territory which have taken place since the census of 1901, including the projected transfer of part of Chanda District, with an arch of 593 squart miles, to Madras Presidency.

NAGRUE DIVISION. Districts which were severely affected by distress or famine in several years, while the population of the western or cotton Districts, which escaped more lightly, remained almost stationary. In 1901 Hindus numbered nearly 84 per cent, of the population, and Animists 13 per cent., while the followers of other religions included Musalmans (86,931), Jains (6,624) and Christians (7,113), of whom 3,030 were Europeans and Europeans. The total mea is 23,521 square miles and the density of population 115 persons per square mile. The Division contains 24 towns out of the Provincial total of 59, and 7,898 villages. Nagrue (127,731), the headquarters of the Central Provinces Administration, is the principal commercial centre, and Kamptee (38,868) is a cautonment 10 miles from Nagrue. Chanda, Bhandak and Rames contain interesting archeological remains.

WAEDHA DISTRIOT. Houndaries, configuration and hill and river systems

Wardha District.—A District in the Nagpur Division of the Central Provinces, Iving between 20° 18' and 21° 22' N. and 78° 3' and 79° 14' E., and occupying the west of the Nagpur plain, at the foot of the Satrura hills adjoining Berar. It is bounded on the north by the Ameroti District. on the , west by the Amiaoti and Yeotmal Districts of Berar; on the south by Chanda; and on the east by Nagpur. It consists of a long strip of land outending from north-west to routh-east along the right bank of the river WARDHA, from which the District takes its name, very narrow at its northern extremity and gradually increasing in width towards the south. Its area is 2,425 square miles. An outlying spur of the Satpura range runs down through the north of the District, and most of the Arvi tabeil with the exception of a strip along the bank of the Wardha is hilly country. The central and southern portion is an undulating plain, intersected by streams, and broken here and there by isolated hills, rising abruptly from its surface. Alhe oped country is in parts well wooded, but over considerable areas is scantily furnished with any trees but the thorny rabit (Acacia arabica); and us the detached hills arogenerally bare and slony, the landscape presents a some what desolate and bleak appearance. The villages, generally situated on slightly elevated ground to enable water to

Wardha District. Fadha. There is little forest game. Blackbuck are fairly numerous in the open country. Among game birds the bustard may be mentioned, which is found in the south of the District. Pig abound all over the plain and the District is the regular country of the Nágpur Hunt Club.

Rainfall and chuzata.

The annual rainfall is 41 inches. The climate is hot and dry but healthy. Ophthalmia is prevalent in the summer months. Leprosy was formerly a comparatively common disease, but the most recent figures show a large decrease.

History.

Very little is definitely known of the history of the District previous to the seventeenth century, but it seems to have been included in the Mughal empire. Paunar was the headquarters of a Sibah, subordinate to the governor of Ellichpur, and in this territory was comprised the greater part of the south of the District. Ashti, with the north of the District. was held by another Muhammadan family which received sanade from Jahángír and Aurangzeb. The Muhammadans penetrated into the southern portion of the Central Provinces as far as Wardha and Chanda, though Nagpur and the Districts east of it remained practically an unknown country during the period of their ascendancy. On the fall of the Mughal empire the greater part of the District passed under the control of the Gond Rajas of Deogarh in Chlind. wira, and its subsequent history is that of Nágpur, which shortly afterwards became their capital. But Ashti with the tracts adjoining it seems to have been incorporated in the territories of the Nizam of Hyderabad, who, after the Bhonsla conquest, continued in joint possession with the Marathas, 40 per cent. of the revenue of the tract going to Hyderábád and 60 per cent. to the Nagpur Raja, Wardha with the rest of the Nagpur kingdom became British territory in 1858, and was formed into a separate District in 1862.

Archwology.

The archaelogical remains are of very slight interest, but a number of tembs and temples are objects of pilgrinage. The most important of these is the temb of a Muhammadan shint Khwaja Shaikh Farid at Girar on the eastern border of the Hinganghat tahsil. The hill which forms the site of his temb is covered with fossils of the shape of nutmegs, and these are supposed to have been the stock-in-trade

WARDIA DISTRICT.

in which these are the sole staples has been generally prosperons. About 86 per cent of the population are Hindus, 10 per cent. Animists, and nearly 4 per cent. Muhammadans. About 75 per cent. of the Gonds in the District are returned as Animists. The statistics of language show that 70 per cent. of the population speak Maráthí; of the remainder 13,612 persons, probably all Muhammadans, speak Urdú, 25,710, principally Bráhmans and Rájputs who have come from northern India, Hindí, 39,385 Gondí, and 2,428 Telugu.

Their castes and occupa-

The principal landholding castes are Maratha Brahmans and Kunbis. Bráhmans (10,000) constitute 3 and Kunbis (76,000) 20 per cent. of the population The leading Bráhman families generally hold the title of Deshpándia, and the Kunb's that of Deshmukh. The Deshmukh was an officer, who under the Goods was responsible for the settlement of revenue and its collection from the headmen of a circle of villages, and the Deshpindia or head patwari kept the revenue accounts of the same circle. The principal cultivating eastes are Kunbis, Telis (39,000) and Mális (17,000), Telis being considered the most efficient and successful. Gonds number 40,000 or about 10 per cent. of the population. They live in the open country and are generally fairly civilised. There are very few Gond landowners, but numbers of them are tenants and farm-servants; and they are also employed as factory hands, constables, and forest quards. The Kolams are a small tribe akin to Gonds, found in the Arvi tabsil and speaking a dialect of Gondi with an admixture of Telugu. About 75 per cent, of the population of the District are returned as dependent on agriculture.

Christian Missions.

Christians number 146, of whom 62 are Presbyterians and 39 Roman Catholics. This figure includes 100 native Christians. The United Free Church of Scotland has a mission station in the town of Wardha.

General 'ngricultural conditions,

Nearly the whole area of the District consists of a that covering of black or dark brown soil over a sheet of trap rock. The earth varies in depth from ten feet to a few inches, the average thickness being about two feet. The best black soil is found principally in the level ground along the kit.

bank of the Wardha river. In the hilly country of the Wardha north shallow brown soil is found mixed with sand.

More than 120 square miles are held wholly or partially Chief agriculfree of revenue, and 2,984 acres have been sold outright under and crops. the Waste Land Rules. The principal statistics of cultivation in 1908-04 are shown below, with areas in square miles:-

Tabsfl.	Total.	Cultivated.	Irrigated.	Culturable waste.	Forests.
Wardhá Arví Hinganghát	 809 890 729	629 472 540	1 2	87 89 141	180 17
•	2,428	1,641	31	817	201

The occupied area is extremely large, amounting to 81 per cent. of the whole District, excluding Government forest. The largest proportion of unoccupied land is in the Arvi tahsil, where 33 per cent. of the proprietary area is waste. Over most of the District the limit of cultivation has been reached. Cotto and jouar (Sorghum rulgare) are now the staple crops, cov. ing 578 and 454 square miles respectively. About 160 square miles are devoted to wheat and 128 to linseed. The crops for the spring harvest are grown principally in the Hinganghát tahsíl and the southern part of Wardhá and only to a small extent in Arvi. A most noticeable feature of the recent statistics is the substitution of the autumn for the spring -crops, the area under cotton and jowar grown separately and with an admixture of the pulse arhar having increased from 52 to 66 per cent. of the total in the last few years. This is partly to be attributed to the succession of poor wheat harvests, finnd more particularly to the high price of cotton and the large fits which are obtained from its cultivation. iseed (128 square miles) is larger in Wardha than in any District of the Provinces except Nagpur, Raipur and Bilaspur. As this crop is more often adversely affected by damp than drought, the soil and climate of Wardha are fayourable to its growth. Jowar has now replaced wheat as the staple food of all except the richest classes. Rice is sown in a very small area, chiefly in the Girar pargana of the Hinganghat tahsil. There is scarcely any sugarcane.

Wandua District Garden crops cover about 2,500 acres, and irrigation is practically confined to these. Turmeric (haldi) is cultivated in the Hinganghat tahsil especially at Waigaon, called Haldia Waigaon on this account, where a large irrigation tank has been constructed. The District has a number of orange and banana plantations; the bananas of Arvihave some reputation; betel-vine gardens exist in Ashti and Julgaon.

Improvements in agricultural practice.

At the present time the acreage of the valuable cotton crop increases annually, while more care is expended on its cultivation than formerly, and manure is applied to it whenever obtainable. The three-coultered sowing drill and weeding hoe-plough of the Deccan are generally used in Wardha, and some improvement has been made in their construction-Fodder-cutting machines have recently been introduced by the Agricultural department which are considered locally to double the value of jowar fodder, and several landowners have purchased them. The Hindi agricultural gazette published by the department has a considerable circulation in Watchá, and some landowners have sent their sons to the agricultural training school at Nágpur. A total sum of Rs. 31,000 was advanced under the Land Improvement Loans Act in the decade ending 1904, from which a large number of new wells have been constructed and a few field-embaukments made. Nearly 3 lakhs were given out in agricultural loans during the same period, about half of this sum having been advanced in the famine of 1900.

Cattle, pomes and sheep,

Cattle are bred all over the District and principally in the Arví tahsil. Special bulls are kept for breeding by all considerable cattle owners. They trot well, and are generally white, and of moderate size, being larger than these of the hill Districts, but smaller than the Berár breeds. Sattle are also imported from Maheer in Hyderábád and from Berár, Hyderábád bulleeks being the most expensive. Good milch cows are bred in Arví and sometimes give as much as 11 to 16 pounds of milk, but the prople make no use of cow's milk, as they realise that the calves are weakened if deprived of it. Buffaloes are also bred for manufacturing ght. They are not used for

draught purposes except on the Wardha river, where they are employed to carry water. The young males are sold in the rice Districts, or sometimes killed at birth by professional cattle-breeders. Goats and sheep are kept by Dhangars, who slaughter the goats for food, and make rough blankets from the wool of the sheep. A few cultivators have also begun to keep them for their manure.

WARDHA DISTRICT.

There are about 700 permanent and 800 temporary wells Irrigation, irrigating 2,400 acres. The ordinary level of the subsoil water is 40 feet below the surface, and wells are very costly, as blasting is usually necessary. Little or no scope exists for remunerative irrigation works.

. The forests of the District cover an area of 201 square Forests. miles, and are situated principally in the Arví tahsíl with a small block in the south-east of Hinganghat. There is some teak forest in Arví. Bamboos are very rare. Though the forests are small and not valuable, the large local demand for produce causes a substantial revenue to be derived from them. This amounted in 1903-04 to Rs. 39,000, of which Rs. 12,000 were realised from sales of timber, Rs. 9,000 from fuel, and Rs. 16.000 from grazing.

Wardhá contains no minerals. The black basalt supplies Minerals. a stone which is used for building, but it is extremely . hard and difficult to dress, and hence is seldom employed for ornamental buildings. Quarries are worked at Saongi, Borgaon, Náchangaon and Taljápur.

Cotton-weaving and dyeing are practically the only hand Manufactures: industries, and these are rapidly being destroyed by the competition of the mills. Nearly all large villages still, however, contain a number of Koshtis, who produce rough country cloth, obtaining their yarn from the mills; while in a few places the dyeing of women's clothes and cotton carpets with imported dyeing agents affords a precarious sustenance to members of the usual dyeing eastes. Coarse tape for bedsteads, is woven from home-spun thread by Garpagaris, who have been compelled by lack of custom to abandon ? their ancestral calling of the protection of the crops from hail; and hemp matting and bags are made by the caste of Bhamtas who grow the hemp themselves, as no

Wardha District. other Hindu caste will consent to do so. The Bhamtas were formerly notorious thieves, and it was said that no girl of the caste accepted a suitor until he had been arrested not less than fourteen times, when she considered that he had attained to manhood; but they have now settled down to this more legitimate avocation. Pardi is a centre of hemp cultivation.

Pactories.

With the expansion of the cotton trade, ginning and pressing factories have recently been constructed in large numbers, and new ones are opened every year. Hinganghat has a spinning and weaving mill, and a second spinning mill, while another spinning mill has been opened at Pulgaon. These mills contain altogether 325 looms and 68,040 spindles, and represent about 24.5 lakhs of capital. Their outturn for 1904 was 61,128 cwt. of yarn and 10,272 cwt. of cloth, most of which is disposed of in Berar and the Central Provinces. The District also contains 89 ginning factories with 1,065 gins and 16 cotton presses, distributed in the towns and larger villages. The collective capital invested in these factories is 26.23 lakhs, and their annual .. profits were estimated at 3.4 laklis in 1904. The bulk of them are owned by Márwári Baniás, and a few by Maráthá Brálmans and others. The ginning and pressing factories only work for four or five months in the year. Twenty-six of these factories have been opened within the last five years.

Commerce,

Cotton, wheat, and linsced are the staple exports of the District. Cotton-seed has lately been exported to Europe. In good years a little jowár is sent to Blandára, and arhar to Calcutta for consumption in Bengal. Hides are sent both to Bombay and Calcutta, and skins to Madras, where they are cured before being shipped to Europe. Yarn and cotton cloth are supplied by the mills of Hinganghat and Pulgaon to other Districts of the Province and to Cawnpore. There is little or no surplus of forest produce; small teak timber from the Arví forests is sent to Berár, but it is also imported into the District from Betúl. Small quantities of plantains are exported from Arví. Cotton piece-goods are obtained from Europe through Bombay and Calcutta, and from the Nágpur and Cawnpore mills. Silk cloths are imported from Umrer and Hyderábád. The salt used is sea salt from the

WARDHA DISTRICT.

Thana District. Sugar comes from the Mauritius, and also from Mirzapur, but the latter is the more expensive, and is consumed by the richer classes. Gur or unrefined country sugar is brought from Bangalore, and also from Poona District Potatoes are obtained from and Kolhapur State. United Provinces and Chhindwara. Brass vessels are imported from Bhandara, and from Poona and Nasik, and glass bangles from Bombay. Berar wheat is consumed in Arvi tahsil, and rice is brought from Bhandara and Chhattisgarh into the District generally. About 25 per cent. of the export grain trade is in the hands of a European firm, and the remainder is managed by Marwari Banias and Muhammadan Cutchis. The Cutchis export grain and import salt, sugar, and groceries for retail sale. The ghi trade is in the hands of Márwári Baniás and that in yarn and cloth is divided between them and Madrasi Banias or Komatis. Hides and bones are exported by Madrasi Muhammadans.

The Great Indian Peninsula Railway line from Bhusawal Railways and to Nagpur runs through the centre of the District, having a length of 40 miles and six stations within its limits. There is also a branch line from Wardhá junction to Warorá, with a length of 30 miles in the District, and the stations of Soneggon and Hinganghat. The chief feeder roads are those leading from Arvi and Deoli to Pulgaon, from Deoli, Khárangná and Sailú to Wardhá, from Hingní to Sindí, and from Pohná and Samudrapur to Hinganghát. The District has 48 miles of metalled and 136 of unmetalled roads, and the annual expenditure on maintenance is Rs. 25,000. The Public Works department maintain 123 miles of road and the District council 60 miles. Avenues exist on 39 miles.

In 1832-33 heavy rain in the cold weather months made the autumn crops rot on the threshing floors, and blighted the spring harvest, causing severe distress and heavy mortality. In 1868-69 Wardha was not acutely distressed. and as the construction of the railway was in progress, the demand for labour was ample. Again, in 1896-97, the District obtained half a normal harvest, and such distress as occurred was due to the high price of grain. In 1899-1900, owing to the complete failure of the rains, the crop obtained was only a

andra W DISTRICT. quarter of normal, and this followed a poor harvest in the Distress was acute and relief measures previous year. continued for fourteen months, 103,000 persons or nearly 26 per cent. of the whole population being in receipt of assistance in July 1900. The total expenditure was 20 lakhs. Besides road works, some tanks were constructed and improved, and many wells were deepened.

District subdivisions and staff.

The Deputy Commissioner has a staff of three Assistant or Extra-Assistant Commissioners. For administrative purposes the District is divided into three tahsils, each of which has a tahsildar and a naib-tabsildar. The District is included in the Nagpur Forest and Public Works divisions and has no separate Forest Officer or Executive Engineer.

Civil and Cri. minal Justice

The civil judicial staff consists of a District and three Subordinate Judges, two Munsiffs at Wardha, and one each at Arví and Hinganghát. The Divisional and Sessions Judge, Nagpur Division, has civil and criminal jurisdiction A common form of offence is that of theft of ornaments from the body of persons asleep. Much jewellery is worn, as the people are well-to-do, and it is a general practice to sleep outside. The civil litigation is heavy, and owing to the value of land, disputes affecting insignificant areas are not infrequently carried to the highest courts.

Land Revence

Up to 1862 Wardhá was a part of the Nágpur District, administration, and no separate account of its revenue administration need be given. A 30 years settlement was made between 1862 and 1866, at which proprietary rights were conferred. The revenue was fixed at 416 lakhs, which was practically the same as that existing before revision, and represented 79 per cent. of the assets, the proportion taken by the Maráthás having always been very high. During this settlement, the District prospered greatly. The increase in cultivation was nearly 18 per cent., while the prices of agricultural produce rose by 150 per cent. The District was reassessed between 1891 and 1804 for a term varying from 16 to 18 years. The demand was raised to 6.64 lakhs, which fell at 594 per cent." on the assets, and was an increase of 25 per cent. on the previous assessment. The average revenue incidence per acre is R. 0-10-? (highest R. 1-4-5, lowest R. 0-5-2) while that of

the rental is R. 0-15-0 (highest R. 1-15-0, lowest R. 0-7-4). The collections of revenue have varied as shown below, in thousands of rupces:—.

WARDHA DISTRICT.

		1880-81,	1890-91,	1900-01.	1903-01.	
Land revenue Total revenue	***	0.01	5,20 10,57	6,72 10,71	6,42 11,53	

Local affairs outside municipal areas are entrusted to a Local Boards. District council and three local boards, each having jurisdiction cipalities. over one tabsil. The income of the District council for 1903-04 was Rs. 79,000 and the expenditure on education was Rs. 22,000, on civil works Rs. 20,000, and on medical relief nearly Rs. 8,000. Wardha, Arvi, Hinganghat, Deoli and Pulgaon are municipal towns.

The force under the District Superintendent of Police Police Consists of 392 officers and men including 3 mounted constables, besides 1,228 village watchmen for 906 inhabited towns and villages. Wardhá has a District jail with accommodation for 31 prisoners, including 8 females. The daily average number of prisoners in 1904 was 57.

In respect of literacy the District stands seventh in the Education. Province, 3:0 per cent. of the population (7:6 males, and '2 females) being able to read and write. The percentage of children under instruction to those of school-going age is 12. Statistics of the number of pupils in schools are as follows—1880-81, 3,685; 1890-91, 5,296; 1900-01, 5,878; 1903-04, 6,704, including 159 females. The educational institutions comprise four English middle schools, eight vernacular middle schools, and 88 primary schools. There are girls' schools at Wardha, Hinganghat and Arví. The expenditure on education in 1903-04 was Rs. 36,000, of which Rs. 31,000 were provided from Provincial and local funds, and Rs. 4,700 from fees.

The District has 10 dispensaries, with accommodation for Hospitals and 85 in-patients. In 1904, 102,991 cases, of which 448 were dispensaries, of indoor patients, were treated, and 2,372 operations were performed. The expenditure was Rs. 14,000. A veterinary dispensary has also been opened at Wardbú.

and

WARDHA DISTRICT. Vaccination. Vaccination is compulsory in the municipal towns of Wardlife, Hinganghat, Arvi and Deolf. The number of persons successfully vaccinated in 1903-04 was 47 per mille of the District population. A considerable degree of protection has now been attained in this respect.

(Rai Bahádur Purshotam Dás, Settlement Report, 1895. A District Gazetteer is under preparation.)

WARDHA TAUSIL

Wardha Tahsil.—The central and headquarters tahsil of the Wardha District, Central Provinces, lying between 20° 30' and 21° 3' N. and 78° 15' and 78° 56' E., with an area of The population in 1901 was 152,565, and 809 square miles in 1891 was 158,215. The density of population per square mile is 188 persons, which is above the District average. The tahsil contains three towns, WARDHA, the District and tahsil headquarters, population 9,872, DEGLI (5,008) and PULGAON (4.710), and 814 inhabited villages. Excluding 4 square miles of Government forest, 86 per cent. of the available area is occurpied for cultivation. The cultivated area in 1903-04 was, 629 square miles. The land revenue demand in the same year was Rs. 2,58,000 and that for cesses Rs. 25,000. The north-eastern portion of the tahsil forming the Keljhar pargana is hilly, and the remainder is an undulating plain intersected by small streams and broken by low hills. Cotton and jowar are the principal crops.

Arvi Tausil. Arvi Tahsil.—The northern tahsil of the Waruha District. Central Provinces, situated between 20° 45' and 21° 22' N. and 78° 3' and 78° 39' E, with an area of 890 square miles. The population in 1901 was 137,737, and in 1891 was 131,174. The tahsil has two towns, Anvi, the tahsil headquarters, population 10,676, and Ashiri (5,237), and 299 inhabited villages. The density of population per square mile is 156 persons. The tahsil is an important cotton tract, and is known also for its fine breed of cattle. The eastern portion is hilly, while to the west a narrow strip of very fertile black soil lies along the bank of the Wardha river. Excluding 180 square miles of Government forest, 70 per cent. of the available area is occupied for cultivation. The cultivated area in 1903-04 was 472 square miles. The land revenue demand in the same year was Rs. 1,98,000 and that for cesses Rs. 19,000.

ABRTI.

District and Berar under the Mughal empire, and two handsome mansoleums built over the graves of Afghan nobles who administered these territories during the reign of Jahangir are still standing. A cotton ginning and pressing factory was erected in 1894. Ashti possesses an English middle school, and a town fund is raised for purposes of sanitation.

DEOLI.

Deoli.—A town in the Wardhá tahsíl and District, Central Provinces, situated in 20° 39' N. and 78° 29' E., at a distance of 11 miles from Wardhá and 5 miles from Degaon station. Population (1901) 5,008. Deolí was created a municipality in 1867, and the average municipal receipts for the decade ending 1901 were Rs. 4,200. In 1903-04 the receipts were Rs. 6,000' and were derived chiefly from fees on the registration of cattle. Deolí was formerly an important cotton-mart, but has been supplanted by towns on the railway, and the population is now less than in 1872. It contains a hand cotton-weaving industry which is not prosperous, and a large weekly cattle market is held here. The town has a vernacular middle school and a dispensary.

Hindanghat Town.

Hinganghat Town.-The headquarters town of the Hinganghat tabsil, Wardha District, Contral Provinces. situated in 20° 34' N. and 78° 51' E., on the Wardha-Warora branch line of the Great Indian Peninsula Railway, 21 miles from Wardha and 402 from Bombay. The town is on the Wunna river. Population (1901) 12,662. An outbreak of plague in 1898 has not affected its prosperity. The name means the ghat or crossing of the hingan trees (Balanites acgyptiaca). Old Hinganghat was a straggling ill-arranged town, liable to be flooded by the river Wunna during the mousoon. The new town a quarter of a mile distant from the old one is laid out in two sets of three broad streets at right angles to each other and furnished with rows of trees Hinganghat was created a municipality in like boulevards. 1867, and the average receipts and expenditure for the decade ending 1901 were Rs. 35,000. By 1903-04 the income had largely expanded, and amounted to Rs. 70,000. octroi being the principal head of receipt. The town is a leading centre of the cotton trade. The Hingaughat Mill

Company was established in 1881 and has a capital of Hardanauar 8.5 lakhs and 30,888 'spindles. Another 'mill, with nearly 15,000 spindles and 160 looms, began work in 1900, and is the sole property of a resident of Hinganghat, who also 10 cotton has invested 13 lakhs in it. There are ginning factories and 4 pressing factories, containing 266 gins and 2 presses, with a united capital of about 7 lakhs. The town is supplied with water from the Wunna river. A filtration well has been sunk in the bed of the river at a distance of about 2 miles, from which water is pumped into an elevated reservoir and distributed to the urban area in pipes. The works were opened in 1883, the capital expenditure being 1.36 lakhs and the annual maintenance charges Rs. 8,000. Hinganghat has a high school and a dispensary, and a town hall has recently been built. Other large public improvements already projected and likely to be completed in the immediate future are the improvement and extension of the water-works and the construction of a market.

Pulgaon.—A town in the Wardba tahsil and District of the Central Provinces, situated in 20° 44' N. and 78° 19' E., on the Great Indian Peninsula Railway, 19 miles from Wardhá and 452 from Bombay. Population (1901) 4,710. Pulgaon is quite a new town and originally consisted of a collection of huts of the workmen who built the milway bridge over the Wardha rives close by, the name meaning bridge village. It was constituted a municipality in 1901, and the receipts and expenditure for 1903-04 were Rs. 11,000 and 7,000 respectively. The income was derived principally from road tolls and rents of land. Pulgaon is an important centre of the cotton trade, receiving the produce of nearly the whole of the Arvi tabeil. The Pulgnon Spinning Mills were opened in 1892 with a capital of 5 lakhs, and have nearly 15;000 spindles. The outturn of yarn for 1904 was 21,800 cwt., valued at more than 10 lakhs. A weaving department containing 105 looms was added in 1902 at an additional cost of 31 lakhs. There are also 5 cotton ginning factories and 3 pressing factories, with a total capital of 44 lakhs and containing 146 gins and 3 presses. Pulgaon has a primary school and a dispensary.

WARDHA TOWN.

Wardha Town.—The headquarters town of the Wardha District, Central Provinces, situated in 20° 45' N. and 78° 37' E., on the Great Indian Peninsula Railway, 471 miles from Bombay and 49 from Nagpur. It is also the junction for the branch line to Warora in the Chanda District. Population (1901) 9,872. Since 1872 the population has nearly trebled. The present town was founded in 1866, the site having been selected for the headquarters of the new District of the same name, and has been carefully laid out with wide and regular streets so as to permit of expansion. It was created a municipality in 1874, and the average municipal receipts and expenditure for the decade ending 1901 were Rs. 33,000 and Rs. 34,000, respectively. In 1903-04 the income had expanded to Rs. 45,000, the chief sources being road tolls, a water-rate and miscellaneous receipts. Wardhá is an important cotton mart, and contains 7 ginning and 4 pressing factories, with 164 gins and 4 presses, and a total capital of about 5 lakhs. There are four printing presses, three of which use English and Maráthí type and one only Marathi. The water-supply of the town is obtained from the Dham river at a distance of 5 miles. A dam has been constructed across the river at Paupar, giving a level sheet of water for about six furlongs. The water is led through artificial filter-beds of sand to an underground reservoir, and thence pumped into an elevated service tank from which it is carried to the town. water-works were completed in 1898 at a cost of 2.25 lakhs. A weekly cattle market is held here. Wardha has an English middle school and girls' school, three dispensaries, including mission and police hospitals, and a veterinary dispensary. Further public improvements to be carried out in the immediate future are the construction of a high school and hostel at an expenditure of Rs. 25,000' and a complete drainage scheme to cost Rs. 35,000.

THTRIOT. Boundaries, configuration and bill and

Nagpur District.- A District of the Central Provinces, with an area of 3,840 square miles, lying between 20° 35' and 21° 44' N., and 78° 15' and 79° 40' E, in the plain to which river systems. it gives its name at the southern base of the Satpura hills.

NAGPUR DISTRICT.

It is bounded on the north by the Chhindwara and Sconi Districts; on the east by Bhandara; on the south and west by the Chanda and Wardha Districts; and along a small strip on the north-west by the Amraotí District of Berár. The greater part of the District is an undulating plain, but it is traversed by low hill ranges. In the north a strip of the Sátpurá hills is included within its limits, narrow on the west, but widening to a breadth of 12 miles or more towards the cast. Immediately south of them lies the western extremity of the Ambágarh hills on which stand the well-known temples of Rámtek. On the western border another low range of hills runs down the length of the District, and after a break formed by the valley of the Wunna river, continues to the south-east past Umrer cutting off on its southern side the valley of the Nand. A third small range called the Pilkápár hills crosses the Kátol tahsíl from north to south. There are also a few detached hills, notably that of SITABALDI in Nagpur city, which is visible for a long distance from the country round. The hills attain to no great altitude, the highest peaks not exceeding 2,000 feet, but vary greatly in appearance, being in places extremely picturesque, and clothed with forest, while elsewhere they are covered by loose stones and brushwood, or are wholly bare and arid. The Wardhá and Waingangá rivers flow along part of the western and eastern borders respectively, and the drainage of the District is divided between them. The waters of about a third of its area on the west are carried to the Wardha by the Jam, the Wunna, and other minor streams. The centre is drained by the Pench and Kanhan, which, flowing south through the Sátpurá hills, unite just above Kamptee, where they are alsojoined by the Kolár; from here the Kanhán carries their joint waters along the northern boundary of the Umrer tahsil to meet the Wainganga on the Bhandara border. the east a few small streams flow direct to the Wainganga. The richest part of the District is the western half of the Katol tabsil cut off by the small ranges described above. possesses a soil profusely fertile, and teems with the richest. garden cultivation. Beyond the Pilkapar hills the plain country extends to the eastern border. Its surface is scarcely

NAGPUE DISTRICT. ever level, but it is closely cultivated, abounds in mango-groves and trees of all sorts, and towards the east is studded with small tanks which form quite a feature in the landscape. The elevation of the plain country is from 900 to 1,000 feet.

Goology.

The primary formation of the rocks is sandstone associated with shale and limestone. The sandstone is now covered by trap on the west, and broken up by granite on the east, leaving a small diagonal strip running through the centre of the District and expanding on the north-west and south-east. The juxtaposition of trap, sandstone, and granite rocks in this neighbourhood invests the geology of Nagpur with special importance.

Botany.

The forests are mainly situated in a large block on the Satpura hills to the north-east, while smaller isolated patches are detted on those extending along the south-western border. The forest growth varies with the nature of the soil, saj (Terminalia tomentosa), achar (Buchanania latifolia) and tendu (Diospyros tomentosa) being characteristic on the heavy soils, teak on good well-drained slopes, salui (Boswellia serrata) on the steep hill sides and ridges, and satinwood on the sandy levels. In the open country mango, mahna (Bassia latifolia), tamarind, and date-palm are common.

Fauna.

There is nothing noteworthy about the wild animals of the District, and from the sportsman's point of view it is one of the poorest in the Province. Pig abound all over the country, finding shelter in the large grass reserves or groves of date-palm. Partridge, quail and sandgrouse are fairly common, bustard are frequently seen in the south, and florican occasionally. Snipe and duck are obtained in the cold weather in a few localities.

Climate and temperature.

Nagpur has the reputation of being one of the hottest places in India during the summer months. In May the temperature rises to 116°, while falling on clear nights as low as 70°. In the rains the highest day temperature soldom exceeds 95°, and the lowest at night is about 70°. In the cold weather the highest temperature is between 80° and 90° and the lowest about 50°. Except for three months from April' to June, when the heat is intense, and in September, when

the atmosphere is steamy and the moist heat very trying, the climate of Nágpur is not unpleasant

NAGPUR DISTRICT.

The average rainfall is 46 inches, but less is received in the Rainfall. west than in the east of the District. Complete failure of the rainfall has in the past been very rare, but its distribution is capricious, especially towards the end of the monsoon, whon the fate of the harvest is in the balance.

There is no historical record of Nagpur prior to the History. commencement of the 18th century, when it formed part of Bakht the Gond kingdom of Deogarh, in Chhindwara. Buland, the reigning prince of Deogarh, proceeded to Delhi. and appreciating the advantages of the civilisation which he there witnessed, determined to set about the development of his own territories. To this end he invited Hindu artificers and husbandmen to settle in the plain country and founded the city of Nágpur. His successor, Chánd Sultán, continued the work of civilisation and removed his capital to Nágyur. On Chánd Sultán's death in 1739 there were disputes as to the succession, and his widow invoked the aid of Raghují Bhousla, who was governing Berár on behalf of the Peshwá. The Bhonsla family were originally headmen of Deorá, a village in the Sátára District, from which place their present representative derives his title of Rájá. Raghují's grandfather and his two brothers had fought in the armies of Sivaji, and to the most distinguished of them was entrusted a high military command and the collection of chauth in Berár. Raghují, on being called in by the contending Gond factions, re-placed the two sons of Chand Sulian on the throne-from which they had been ousted by a usurper, and retired to Berar with a suitable reward for his assistance. Dissensions, however, broke out between the brothers, and in 1743 Raghují again intervened at the request of the elder brother, and drove out his rival. But he had not the heart to give back a second time to the weaker Gond the country he held within his grasp. Burhán Sháh, the Gond Rájá, though retaining, from motives of policy on Raghuji's part, the outward insignia of royalty, became practically a state pensioner and all real power passed, to the Maráthá chief. Bold and

Nagpúr District. decisive in action Raghují was the perfect type of a Maráthá leader; he saw in the troubles of other states only an opening . for his own ambition, and did not even require a pretext for plunder and invasion. Twice his armies invaded Bengal, and he obtained the cession of Cuttack. Chánda, Chhattisgarh and Sambalpur were added to his dominions between 1745 and 1755, the year of his death. His successor Jánojí took part in the wars between the Peshwa and Nizam, and after he had in turn betrayed both of them, they united against him, and sacked and burnt Nagpur in 1765. On Janoji's death his brothers fought for the succession, until one shot the other on the battle field of Panchgaon, six miles south of Nagpur, and succeeded to the regency on behalf of his infant son Raghují II, who was Jánojí's adopted heir. In 1785 Mandlá and the upper Narhadá valley were added to the Nágpur dominions by treaty with the Peshwa. Mudhoif, the regent, had courted the favour of the English, and this policy was continued for some time by his son Raghuji'll, who acquired Hoshaugábád and the lower Narbadá valley: But in 1803 he united with Sindhia against the British Government. The two chiefs were decisively defeated at Assaye and Argaon, and by the treaty of Deogaon of that year Raghují ceded to the British Cuttack, southern Berar and Sambalpur, which was, however, relinquished in 1806.

Up to this date the Maráthá administration had been on the whole a good one, and the country had prospered under their The first four of the Rhouslas givere military chiefs with the habits of rough soldiers, connected by blood had. by constant familiar intercourse with all their principal officers. Descended from the class of cultivators they ever favoured and fostered that order. They were rapacious but seldom ernel to the lower classes. Up to 1792 their territories were seldom the theatre of hostilities, and the area of cultivation and revenue continued to increase under a fairly equitable and extremely elementary system of government. After the treaty of Deogaon, however, all this was changed. Raghují had been deprived of a third of his territories and he attempted to make up the loss of revenue from the remainder.

NAGPUR DISTRICT.

The districts were meroilessly rackrented and many new taxes imposed. The pay of the troops was in arrears and they maintained themselves by plundering the cultivators, while at the same time commenced the raids of the Pindáris, who became so bold that in 1811 they advanced to Nágpur and burnt the suburbs. It was at this time that most of the numerous village forts were built, to which on the approach of these marauders the peasant retired and fought for bare life, all he possessed outside the walls being already lost to him.

On the death of Raghují II in 1816, his son, an imbecile, was soon supplanted and murdered by the famous Mudhojí or Appa Sáhib. A treaty of alliance viding for the maintenance of a subsidiary force by the British was signed in this year, a Resident having been appointed to the Nagpur court since 1799. In 1817, on the outbreak of war between the British and the Peshwa, Appa Sáhib threw off his cloak of friendship, and accepted an embassy and title from the Peshwa. His troops attacked the British and were defeated in the brilliant action at Sitabaldi, and a second time round Nagpur. As a result of these battles the remaining portion of Berár and the territories in the Narbadá valley were ceded to the British. Appa Sáhib was reinstated on the throne, but shortly afterwards this discovered to be again intriguing, and was deposed and forwarded to Allahabad in custody. On the way, however, he corrupted his guards, and escaped, first to the Mahadeo hills and subsequently to the Punjab. A grandchild of Raghují II was then placed on the throne, and the territories were administered by the Resident from 1818 to 1830, in which year the young ruler known as Raghuif III was allowed to assume the actual government. He died without heirs in 1853 and his territories were then declared Nágpur was administered by a Commissioner until the formation of the Central Provinces in 1361. the Mutiny a scheme for a risking was formed by a regiment of irregular cavalry in conjunction with the disaffected Muham. madans of the town, but was frustrated by the prompt action of

NAGPUR District. the civil authorities, supported by Madras troops from Kamptee. Some of the native officers and two of the leading Muhammadans of the city were hanged from the ramparts of the fort, and the disturbances ended. The aged Maráthí princess Baká Bai, widow of Raghují II, used all her influence in support of the British, and largely contributed by her example to keep the Maráthá districts loyal.

Archmology.

In several localities in the District are found circles of rough stones sometimes extending over considerable areas. Beneath some of them fragments of pottery, flint arrow heads, and ironware, evidently of great antiquity, have been discovered. These were constructed by an unknown mee, but are ascribed by the people to the pastoral Gaolis, and are said to be their encampments or burial places. The remains of the fort of Párseoní constructed of unhewn masses of rock are also ascribed to the Gaolis, and date from a very early period. The buildings of Rámtek, Kátol, Kelod and Saoner are separately described. Other remains which may be mentioned are the old Gond fort of Bhiugarh on the Pench river, and the temples of Adása and Bhugaon, and of Jákhápur on the Saoner road.

The people.

The population of the District in the last three years of census was as follows: 1881, 697,356; 1891, 757,862; 1901, 751,844. Between 1881 and 1891 the increase was nearly 9 per cent., the District having been generally prosperous. During the last decade the population has been almost stationary. The number of deaths exceeded that of births in the years 1894 to 1897 inclusive, and also in 1900. There was a considerable loss of population in the wheat-growing tracts of Nagpur and Umrer, while the towns and the cotton lands of Kátol showed an increase. There are twelve towns-Nagrun. the District headquarters, KAMPTEE, UMREB, RAMTEK, NAR-KHER, KHAPA, KATOL, SAONER, KALMESHWAR, MOHPA, KELOD, and Mowan, and 1,681 inhabited villages. The urban population amounts to 32 per cent. of the total and is the highest in the Province. Some of the towns are almost solely agricultural, and these as a rule are now declining in importance. But others which are favourably situated for trade, or for the

establishment of cotton factories, are growing rapidly. Nagruz The following table gives the principal statistics of DISTRICT. population in 1901:-

• •	}	Number of		}		Per-	Vamilia

Kátol	900	5	350	162,598	200	+ 3.2	4,718	
District Total .	3,940	12	1,681	751,844	193	-08	37,003	

About 88 per cent. of the population are Hindus, nearly 6 per cent. Muhammadans, and 5 per cent. Animists. are 2,675 Jains and 481 Pársís. Three-fourths of the Muhammadans live in towns. Many of them come from Hyderábád and the Deccan, and they are the most turbulent class of the population. About 77 per cent. of the population speak Maráthí, 9 per cent. Hindí, 51 per cent. Gondí. 5 per cent. Urdú, and I per cent. Telugu. It is curious that nearly all the Gonds in the District were returned at the census as retaining their own vernacular.

. The principal landholding castes are Brahmans (23,000), Their castes Kunhin (152,000) and Maráthás (11,000). The Maráthá tions. Brahmans naturally form the large majority of this caste, and besides being the most extensive proprietors, are engaged in money-lending, trade, and the legal profession, and almost monopolise the better appointments in Government service. The Kunbis are the great cultivating class. They are plodding and patient, with a strong affection for their land, but wanting in energy as compared with the castes of the northern Districts. The majority of the villages owned by Maráthas are included in the estates of the Bhonsla family and their relatives. A considerable proportion of the Government political pensioners are Maráthás. Many of them also hold villages or plots, but as a rule they are extravagant in their living, and several of the

NAGPUR DISTRICT. old Maráthá nobility have fallen in the world. The native army does not attract them, and but few are sufficiently well educated for the more dignified posts in the civil employ of Government. Raghvís (12,000), Lodhís (8,000) and Kirárs (4,000) represent the immigrants from Hindustán and are exceptionally good cultivators. The Kirárs, however, are much given to display and incur extravagant expenditure on their dwelling houses and jewellery, while the Lodhis are divided by constant family fends and love of faction. There are nearly 46,000 Gonds, constituting 6 per cent. of the population. They have generally attained to some degree of civilisation, and grow rice instead of the light millets which suffice for the needs of their fellow tribesmen on the Satpuras. The menial caste of Mahars form a sixth of the whole population, the great majority being cultivators and labourers. The rural Mahar is still considered as impure, and is not allowed to drink from the village well. nor may his children sit at school with those of the Hindu But there are traces of the decay of this tendency, as many Mahars have become wealthy and risen in the world. About 58 per cent. of the population were returned as dependent on agriculture in 1901.

Christian Missions.

Christians number 6, 163, of whom 2,870 are Europeans and Emasians and 3,293 natives. Of the Christians the majority are Roman Catholics and belong to the French Mission in Nagpur There are also a number of Presbyteriaus, the converts of the Scotch Free Church Mission. Nágpur is the headquarters of a Roman Catholic Diocese, which supports high and middle schools for European and Eurasian children, and natives. and orphanages for boys and girls, the clorgy being assisted by French nuns of the Order of St. Joseph who live at Nágpur and Kamptee. A Mission of the Free Church of Scotland is also located here, and supports a number of educational and other institutions at Nagpur itself and in the interior of the District; among these may be mentioned the Hislop Aided College, numerous schools for low-caste children, an orphanage and boarding-school for Christian girls, and the Mure Memorial Hospital for women. A small mission of the Church of England is also located in Nagpur, and one of the Methodist Episcopal Church in Kamptee.

The prevailing soil is that known as black cotton. It MAGPUR seldom attains to a depth of twelve feet, and is superimposed General agrion a band of conglomerate and brown clay. Rich black ditions. clay is only found in very small quantities, and the commonest soil is a dark loam mixed with limestone pebbles and of very considerable fertility. The latter covers 65 per cent. of the cultivated area, and of the remainder 27 per cent. consists of an inferior variety of the same soil, very shallow and mixed with gravel or saud, and occurring principally in the hilly country. Very little really noor land is thus under cultivation.

About 383 square miles are held wholly or partially free of Chief agricul- , revenue and 2,500 seres of Government land have been settled ties on the ryotwari system. The balance of the District area is held on the ordinary tenures. The following table shows the principal statistics of cultivation in 1903-04, areas being in square miles :--

crops.

	Tabell.		Total.	Culti- vated.	Irrigated.	Cultur- able waste.	Forcets.

Jonar and cotton are the principal crops, covering either alone or mixed with the pulse arker 661 and 639 square miles respectively. Of other crops wheat occupies 353 square miles, til 84 square miles, linseed 132 square miles, and gram 31 square miles. Cotton and jorrar are grown principally in the west and centre of the District, rice in the east, where the rainfall is heavier, and wheat, linsced and gram in the centre and south. The main feature of recent years is the increase in the area under autumn crops, cotton and jowdr, which are frequently grown in rotation. The acreege of cotton and cotton-arkar line more than doubled since settlement, and that of jourdy and ibroar with arhar has risen by 23 per cent. This change is to be attributed mainly to the high prices prevailing for

NAGPUR DISTRICT. cotton, and partly also to the succession of unfavourable spring harvests which have lately been experienced. shows a loss of 146 square miles and lineced of 106 during the same period. There are two principal varieties of cotton, of which one with a very short staple but yielding a larger supply of lint is generally preferred. Cotton-seed is now a valuable commercial product. The recent years of short rainfall have had a prejudicial effect on the rice crop, the area under which was only 22 square miles as against 50 at settle-The bulk of the rice grown is transplanted. A number of profitable vegetable and fruit crops are also grown, the most important of which are oranges which covered 1,000 acres in 1903-04, chillies nearly 6,000 acres, castor nearly 4,000 acres, tobacco 450 acres, and turmeric 170 acres. About 17,000 acres were under fodder-grass in the same year. The leaf of the betel-vine gardens of Ramtek has a special reputation, and it is also cultivated at Parseoni and Mansar. about 130 acres being occupied altogether. Kapúri pán is grown for local consumption and Bengalá for export.

Improvements agricul-

The occupied area increased by 12 per cent. during the m agricultural practice, currency of the 30 years settlement (1863-64) and has further increased by 3 per cent. since the last settlement (1892-94). The scope for further extension is very limited. The acreage of the valuable cotton or p increases annually, and more care is devoted to its cultivation than formerly. Cotton fields are manured whenever a supply is available, and the practice of pitting manure is growing in favour. In recent years the embankment of fields with low stone walls to protect them from erosion has received a great impetus in the Kátol tahsíl. In the ten years ending 1904, Rs. 79,000 were advanced under the Land Improvement Loans Act for the construction of wells, tanks and field embankments, and 1.77 lakhs under the Agriculturists' Loans Act.

Cattle, ponies and sheep.

Owing to the scarcity of good grazing grounds the bulk of the agricultural cattle used are imported, it being estimated that only 25 per cent, are bred locally. The hilly country in the north of the Ramtek tabeil is the principal breeding ground. Cattle are imported from Berar, Chlindwara and Chanda. Buffaloes are kept for the manufacture of ghi. Goats are largely bred and sold for food, while the MASPUR flocks are also hired for their manure. Cattle races take District. place annually at Silli in Umrer, at Irsí in Rámtek, and at Sakardará near Nágpur, these last being held by the Bhonsla family. Large weekly cattle-markets are held at Sonegaon, Kodámendhí, Bhiwapur, and Mohpa.

Irrigation.

Only 25 square miles are irrigated, the bulk of which is rice and the remainder vegetable and garden crops occasionally gets a supply of water, if the cultivator has a well in his field. The District has 995 irrigation tanks and 4,302 wells. A project for the construction of a large reservoir at Ramtek, to irrigate 40,000 acres and protect another 30,000, at an estimated cost of 16 lakhs, has been sanctioned.

Porcats.

The Government forests extend over 515 square miles, of which nearly 350 are situated on the foot-hills of the Sátpurás on both sides of the Pench river, and 170 consist of small blocks lying parallel to the Wardha boundary, and extending from the west of Katol to the south and east of Umrer. Small teak is scattered through the first tract mixed with bamboos on the extreme north, but in no well-defined belts. Satinwood, often nearly pure, is found on the sandy levels. The second tract contains small but good teak in its central blocks from Kátol to the railway, but poor mixed forests to the north, and chiefly scrub to the south in the Umrer tahsil. Owing to the large local demand the forests yield a substantial revenue. This amounted in 1903-04 to Rs. 63,000, of which Rs. 10,000 were realised from sales of timber, Rs. 16,000 from firewood, and Rs. 26,000 from grazing.

Deposits of manganese occur in several localities, princi-Minerals. pally in the Ramtek tahsil. A number of separate mining and\_prospecting leases have been granted, and a light tramway has been laid by one firm from Thársa station to : Waregaon and Mandri, a distance of about 15 miles. The output of manganese for 1904 was 66,000 tons. -Mines are being worked at Mansar, Kandri, Satak. Lohdongri, Waregaon, Kachurwahi, Mandri, Pali and other villages. A quarry of white sandstone is worked at Silewara on the Kanhan river from which long thin slabs well suited for huilding are obtained.

NAGPUB District, Aits and Manufactures.

The weaving of citton cloths with silk borders is the staple hand industry, the principal centres being Nagpur and Umrer. Gold and silver thread obtained from Burbánpur are also woven into the borders. The silk is obtained from Beugal and from China through Bombay, spun into thin thread, and is made up into different thicknesses locally. Tasar silk cocoons are received from Chhattisgarh A single cloth of the finest quality may cost as much as Rs. 150, but loin-cloths worth from Rs. 8 to Rs. 25 a pair, and women's cloths from Rs. 3 to Rs. 25 each, are most in demand. White loin-cloths with red borders are woven at Umrer, the thread being dyed with lac, and coloured cloths for women are made at Nagpur. Cheap cotton cloth is produced by Momins or Muhammadan weavers at Kamptee and by Koshtis at Khapa. Coarse cloth is also woven by the village Mahars, handspun thread being still used for the warp, on account of its superior strength, and is dyed and made up into carpets and mattresses at Saoner and Patanarongi. Sawargaon, Mowar, and Narkher also have dyeing industries. Nearly 13,000 persons were returned as supported by the silk industry, 30,000 by cotton handweaving, and 2,500 by dyeing in 1901. Brass-working is carried on in Nagpur and Kelod, and iron nut-cutters and penknives are made in Nágpur.

Nagpur has two cotton spinning and weaving mills, the Empress Mills, opened in 1877, and the Swadeshi Spinning and Weaving Company which started work in 1892. Their collective capital is 62 lakhs. Nagpur also contains 12 giuning and 11 pressing factories, Kamptee 3 and 2 respectively, and Saoner 3 and 2, while one or more are situated in several of the towns and larger villages of the cotton tract. The majority of these factories have been opened in the last five years. They contain altogether 673 gins and 18 cotton presses, and have a collective capital of 29 lakhs approximately. Nearly 11,000 persons were shown as supported by employment in factories in 1901 and the numbers must have increased considerably since then. The ginning and pressing factories, however, only work for four or five months in the year. The capitalists owning them are principally Márwári Baniás and Maráthá Brühmans

and in a smaller degree Muhammadan Bohrás, Pársis, and Nagruz Europeaus.

Raw cotton and cotton-seed, linseed, til, and wheat Commerce. are the staple exports of agricultural produce. Oranges are largely exported, and an improved variety of wild plum (Zizyphus jujuba), which is obtained by grafting. The annual exports of oranges are estimated at a lakh of rupees. Betel-leaf is sent to northern India. Yarn and cotton cloth are sent all over India and to China, Japan and Burma by the Empress Mills, while the Swadeshi Mills find their best market in Chhattisgarh. Hand-woven silk-bordered cloths to the value of about 5 lakhs annually are exported from Nagpur and Umrer to Bombay, Berar, and Hyderabad, the principal demand for them being from Maráthá Manganese ore is now a staple export. Many articles of produce are also received at Nagpur from other Districts and re-exported. Among these may be mentioned rice from Bhandara and Chhattisgarh, timber and bamboos from Chánda, Bhandára, and Seoní, and hamboo matting from Chanda. Cotton and grain are also received from the surrounding Districts which are off the line of railway. Sea salt from Bombay is commonly used, and a certain amount is also received from the salt hills of the Mauritius sugar is imported, and sometimes Punjah. mixed with the juice of sugar-cane to give it the appearance of Indian sugar, which is more expensive by one pound in the rupee. Gur, or unrefined sugar, comes from the United Provinces, and also from Bársi and Sholapur Rice is imported from Chhattisgarh and Bengal, and a certain amount of wheat from Chhindwara is consumed locally, as it is cheaper than Nagpur wheat. The finer kinds of English cloth come from Calcutta and the coarser ones from Bomhay. Kerosene oil is bought in Bombay or Calcutta according as the rate is chemer. The use of ten is rapidly increasing all over the Distriet. Soda-water is largely consumed, about fen factories having been established in Nagpur. Woollen and iron goods come from England. A European firm practically monopolises the export trade in grain and shares the cott in trale with Marwari Banias and Maratha Brahmans.

Nagpur District. Lád Baniás export hand-woven cloth and Muhammadans and Márwáris manage the timber trade. Bohrás import and retail stationery and hardware, and Cutchí Muhammadans deal in groceries, cloth, salt, and kerosene oil. Kamptee has the largest weekly market, and the Sunday and Wednesday bazars at Nágpur are also important. The other leading markets, excluding those for cattle which have already been mentioned, are at Gaorí and Kelod for grain and timber, and Mowár for grain. A large fair is held at Rámtek in November at which general merchandise is sold, and small religious fairs take place at Ambhorá, Kudhári, Adása, and Dhápewára.

Railways and Roads.

The Great Indian Peninsula Railway from Bombay has n length of 27 miles in the District with three stations and its terminus at Nagpur. From here the Bengal-Nagpur Railway runs east to Calcutta, with 5 stations and 34 miles with-. in the limits of the District The most important trade routes are the roads leading north-west from Nagpur to Chhindwara and Katol, the eastern road to Bhandara and through Kúhi, and the north-castern road to Scoui through Kamptee. Next to these come the southern roads through Múl to Umrer, and to Chánda through Bori, Jám, and Warora. There is some local traffic along the road to Amraotí through Bazargaon. The District has 231 miles of metalled and 74 miles of urmetalled roads, and the annual expenditure on maintenance is Rs. 99,000. The Public Works department has charge of 253 miles of road and the District council of 52 miles. Avenues exist on 185 miles, Nagpur being better provided for in this respect than almost any other District in the Province. Considering its advanced state of development, the District is not very well supplied with railways, and there appears to be some scope for the construction of feeder lines to serve the more populous outlying tracts.

Famine.

The Nagpur District is recorded to have suffered from failures of crops in 1819, 1925-26, and 1832-33. There was only slight distress in 1869. In 1896-97 the District was not severely affected, as the jomár, cotton, til, and wheat crops gave a fair outturn. Numbers of starving wanderers

from other Districts, however, flocked into 'Nagpur.' Relief Nagpur measures lasted for a year, the highest number in receipt of assistance being 18,000 in May 1897, and the total expenditure was 5 lakhs. In 1899-1900 the monsoon failed completely and only a third of a hormal harvest was obtained. Relief measures lasted from September 1899 to November 1900. 108,000 persons or 19 per cent. of the population being in receipt of assistance in August 1900. The total expenditure was 19.5 lakhs. work done The consisted principally of breaking up metal, but some tanks and wells were constructed, and the embankment of the reservoir at Ambaiheri was raised.

The Deputy Commissioner has a staff of four Assist-District subant or Extra-Assistant Commissioners. For administrative divisions and purposes the District is divided into four tabsils, each of which has a tabsildár and a naib-tabsildár. Forests are in charge of an officer of the Imperial service, and the Executive Engineer of the Nágpur division, including Nágpur and . Wardhá Districts, is stationed at Nágpur.

The civil judicial staff consists of a District and five Civil and Cri-Subordinate Judges, two Munsiffs at Ramtek and Katol, and minal Justice. one at each of the other tabsils, and a Small Cause Court Judge for Nagpur city. The Divisional and Sessions Judge of the Nágpur Division has jurisdiction in Nágpur District. Kamptee has a Cantonment Magistrate invested with the powers of a Small Cause Court Judge.

Under the Maráthá administration the revenue was Land Revenue The Maráthás apparently retained as a administrafixed annually. standard the demand which they found existing when they received the District from the Gonds. This was called the din jamabandi, and at the commencement of every year an amount varying partly with the character of the previous season, and partly with the financial necessities of the central Government, was fixed as the revenue demand. Increases of revenue were, however, expressed usually as percentages on the ain jamabands. The local officers or kamaishdars, on receiving the unnouncement of the revenue assessed on their charge, called the pátels or headmen of villages together and distributed it over the individual villages

NAGPUR District.

according to their capacity. The patel then distributed the revenue over the fields of the village, most of which had a fixed proportionate value which determined their share Neither headmen nor tenants had any of the revenue. proprietary rights, but they were not as a rule liable to ejectment so long as they paid the revenue. Under the carlier Maráthá rulers the assessment was fairly equitable, but after the peace of Deogaon the District was severely rackrented, and villages were let indiscriminately to the highest bidder, while no portion of the rental was left to the potels. At the commencement of the protectorate after the deposition of Appa Sáhib there were more than 400 villages for which no headmen could be found to accept a lease on the revenue The revenue was at once reduced by 20 per demanded. cent. Cultivation expanded during the management by the British and some increase was obtained, the assessment being made for periods of from 3 to 5 years. During the subsequent period of Maráthá government the British system was more or less adhered to, but there was some decline in the revenue due to lax administration. Many of the cultivating headmen were also superseded by court favourites, who were usually Maráthá Bráhmans. The demand existing immediately prior to the first long-term settlement was 8.77 lakhs. District was surveyed and settled in 1862-64, for a period of 30 years, the demand being raised to 8.78 lakhs. this occasion proprietary rights were conferred on the village During 'the currency of the 30 years settlement, which was concluded a few years before the opening of the railway line to Bombay, the condition of the agricultural classes was extremely prosperous. The area occupied for cultivation increased by 12 per cent. and the prices of the staple food-grains by 140 per cent, while the rental received by the landowners rose by 20 per cent. On the expiry of this settlement, a fresh assessment was made between 1893 and 1896. The revenue demand was raised to 10.57 lakhs, or by 18 per cent. on that existing before revision, Rs. 75,000 of the revenue being assigned. The experience of a number of bad seasons following on the introduction of the new assessment, during which the revenue was collected without

difficulty, has sufficiently demonstrated its moderation. average incidence of revenue per cultivated acre R. 0-12-8 (highest R. 1-4-11, lowest R. 0-6-0), while that of the rental is R. 1-0-3 (highest R. 1-13-10, lowest R. 0-9-1). The new settlement is for a period varying from 18 to 20 years in different tracts. Collections on account of land revenue and total revenue have been, in thousands of runces :-

Total revenue	15,78	18,40	18,96	21,89	

The management of local affairs outside municipal areas, Local Boards is entrusted to a District council and four local boards, each palities, having jurisdiction over one tahsil. The income of the District council for 1903-04 was Rs 1.05,000, while the expenditure on civil works was Rs. 34,000, on education Rs. 27,000, and on medical relief Rs. 6,000. NAGPUR, RAMTEK, KHAPA, KALMESHWAR, UMRER, MOWAR and SAONER are municipal towns.

The police force consists of 1,006 officers and men with Police and a special reserve of 45 under a District Superintendent, who is usually aided by an Assistant Superintendent. There are 2,130 village watchmen for 1,693 inhabited towns and villages. Nágpur has a Central jail with accommodation for 1,322 prisoners, including 90 females. The daily average number of prisoners in 1904 was 710. Printing and binding. wood-work including Burmese carving, cane-work, and clothweaving, are the principal industries carried on in the jail.

.. In respect of education the District stands third in the Education. Provinces, nearly 5 per cent.-of the population (9.2 males and '7 females) being able to read and write. The percentage of children under instruction to those of school-going age is 14. Statistics of the number of pupils are as follows:-1880-81, 10,696; 1890-91, 12,394; 1900-01, 14,991; 1903-04. 14,141, including 1,135 girls. The educational institutions comprise two Arts Colleges, both at Nagpur, with 170 pupils, one of these, the Morris College, also containing Law classes

Nagrup District. with 42 pupils, 5 high schools, 16 English middle schools, 17 veroncular middle schools, and 147 primary schools. The District also contains two training schools and 4 other special schools. The expenditure on education in 1903-04 was 1.74 lakhs, of which I lakh was provided from Provincial and local funds, and Rs. 30,000 from fees.

Hospitals and Dispensaries. The District has 17 dispensaries, with accommodation for 201 in-patients. In 1904, 270,025 cases, of which 1,905 were those of indoor patients, were treated in them, and 6,560 operations were performed. The expenditure in 1904 was Rs. 40,000. Nagpur also contains a Lunatic Asylum with 142 inmates, a Leper Asylum with 30 immates, and a veterinary dispensary.

Vaccination.

Vaccination is compulsory only in the municipal towns of Nagpur, Umrer and Ramtek. The number of persons successfully vaccinated in 1903-04 was 33 per mile of the District population.

(R. H. Craddock, Settlement Report, 1899. A District Gazetteer is being compiled.)

NAGPUR TAUSIL.

Nagpur Tahsil.—The central tahsil of the Nagpur District, Central Provinces, lying between 20° 46' and 21° 23' N. and 78° 44' and 79° 10' E, with an area of 871 square miles. The population in 1901 was 296,117, and in 1801 was 294,202. The tabsil contains 4 towns, Naorun the headquarters of the tahsil, District and Province, population 127,784, Kamptee (38,888), Kalméshwar (5,840) and SAONER (5,281), and 417 inhabited villages The total density of population is 340 persons per square mile and the rural density 136. Excluding 42 square miles of Government forest, 80 per cent, of the available area is occupied for cultivation. The cultivated area in 1903-04 was 578 square miles. The land revenue demand in the same year was Hs. 2,76,000 and that for cesses Rs. 20,000. talisti comprises the fertile plains of Kalmeshwar and Nagpur, the plateau of Kauras, a continuation of the Katol uplands, . and the undulating Wunna valley. Cotton and jowur are the principal crops grown throughout the tabeil, but there is a considerable area of wheat land in the Kalmeshwar and Nagpur plams. '

Ramtek Tahsil.—The northern tahsil of the Nagpur District, Central Provinces, lying between 21° 5' and 21° 44' N. and 78° 55' and 79° 35' E., with an area of 1,129 square miles. The population in 1901 was 150,663, and in 1891 was 157,150. The tabsil contains two towns, RAMTER, the tabsil headquarters, population 8.732, and Khapa (7,615), and 451 inhabited villages. The density of population is 139 persons per square mile. Excluding 313 square miles of Government forest, 77 per cent. of the available area is occupied for cultivation. The cultivated area in 1903-04 was 544 square miles. The land revenue demand in the same year was Rs. 2,27,000 and that for cesses Rs. 23,000. The tabsil contains a helt of hill and jungle at the foot of the Sátpurá range to the north, and in the south lie two fertile plains growing wheat and cotton respectively, and divided by the Pench river.

RAMTER TANSIL.

Umrer Tahsil.—The southern tahsil of the Nagpur Dunen District, Central Provinces, lying between 20° 35' and 21° TAHSIL. 11' N. and 78° 56' and 79° 40' E., with an area of 1,040 square miles. The population in 1901 was 136,476, and in 1891 was 149,350. The tabsil has one town Umarn, the tabeil headquarters, population 15,948, and 457 inhabited The density of population is 131 persons per Excluding 74 square miles of Government sauare mile. forest, 71 per ceut, of the available area is occupied The cultivated area in 1003-04 was for cultivation. 564 square miles. The land revenue demand same year was Rs. 2,41,000 and that for cesses Rs. 22,000. The tabeil contains a large area of wheat-growing land broken by low ranges of isolated hills. It has a heavier rainfall than Nagpur and rice is grown towards the castern border.

Katol Tahsil.—The western tahsil off the Nágpur Katol District, Central Provinces, situated between 21° 2' and 21° Tahsil. 31' N. and 78° 16' and 78° 59' E., with an area of 800 square miles. The population in 1901 was 162,588 and in 1891 was 157,100. The tahsil contains the towns of Katol, the tahsil headquarters, population 7,313, Narkher (7,726), Kelod (5,141), Mohpa (5,336), and Mowan (4,799),

Katol Tahsil.—The western tahsil of the Nagpur Kator. District, Central Provinces, situated between 21°2′ and 21° Taustl. 31′ N. and 78° 15′ and 78° 59′ E., with an area of 800 square miles. The population in 1901 was 162,588 and in 1891 was 157,100. The tahsil contains the towns of Katol., the tahsil headquarters, population 7,313, Narkhern (7,726), Kelon (5,141), Monra (5,336), and Mowar (4,799),

and 356 inhabited villages. The density of population is 200 persons per square mile. Excluding 56 square miles of Government forest, 77 per cent. of the available area is occupied for cultivation. The cultivated area in 1903-04 was 540 square miles. The land revenue demand in the same year was Rs. 2,57,000 and that for cesses Rs. 22,000. The tahsil contains tracts of very fertile land in the valleys of the Wardha and Jam rivers, and some hilly and stony country to the south. It is one of the great cotton-growing areas of the Province.

Kalmeshwar

Kalmeshwar.—A town in the Nagpur tabsil District, Central Provinces, situated in 21° 14' N. 78° 56' E., 13 miles west of Nágpur by road. Kalmeshwar is supposed to have been founded by nomad Ahirs or herdsmen, and the-name to be derived from that of their god Kalma, Population (1901) 5,340. The town stands on black soil, lying low, with bad natural drainage. On a small eminence in its centre is an old fortress said to have been built by a Hindu family from Delhi in the time of Bakht Buland. Kulmeshwar was constituted a municipality in 1867 and the average municipal receipts for the decade ending 1901 were Rs. 4,400. In 1903-04 the receipts were Rs. 5,000, and were mainly derived from a house tax and market dues weekly cattle market is held here and there is some trade in grain and oilseeds. Cotton cloth is woven by hand. Kalmeshwar has an English middle school.

KAMPTEF.

Kamptes (Kámpti).—A cantonment in the Nágpur District of the Central Provinces, situated in 21° 13′ N. and 70° 12′ E., on the Bengal-Nágpur Railway, 10 miles from Nágpur and 529 from Bombay. It stands on the right bank of the river Kanhán, and the cantonment extends in a long narrow line beside the river, with the native town to the south-east. The population in the last four years of census was as follows: 1872, 48,831; 1881, 50,087; 1891, 43,159; 1901, 38,888. The population in 1901 included 26,879 Hindus, 9,852 Muhammadaus, and 1,851 Christians, of whom 1,036 were Europeans and Eurosians. Kamptee is the fourth town in the Province in respect of population. The ordinary garrison consists

KAMPTEE.

of a hattalion of British infantry, one of native infantry, and a field battery. Kamptee was until recently the headquarters of the General Officer Commanding Nagpur District, but this appointment has now (1905) been abolished and the Kamptee garrison is at pre-ent commanded from Ahmadangar. The cantonment was established in 1821 and was made the headquarters of the subsidiary force maintained by the British under treaty with the Nagour kingdom The whole town is included in the contonment. The average recents and expendi ture of the cantonment fund for the last decade were 1:1 lakbs. In 1903-04 the receipts were Rs 1.08,000 and the charges Rs. 1.18.000. During Maráthá rule traders flocked to Kampton on account of the comparative immunity from taxation which they enjoyed within the cantonment, and a large commercial town thus grew up alongside it. Owing to its favourable situation on the roads leading to Nagpur from the Sitpura plateau. Kamptee for a long period monopolised the trade from this area, and it is only within comparatively recent years that the advantages possessed by Nagpur, as the larger town and headquarters of the Province, have enabled it gradually to attract to itself the commercial husiness of Kamptee. To this transfer of trade are to be attributed the stationary or declining figures of population during the last thirty years, and the construction of the Satpura railway should tend to necelerate the process. The town contains three cotton-ginning and two pressing factories with a total capital of 2:1 laklis, three of which were opened in 1891 and 1892 and the others since 1900. A number of Muhammadan hand-weavers produce the cheaper kinds of cloth. Weekly cattle and timber markets are held and the town The Cantonment Magircontains one printing press. trate, who has also the powers of a Small Causa Court Judge, has jurisdiction over the cantonment. The educational institutions comprise a Government high reheal, one English middle, two vernacular middle, and 11 primary schools. The Convent of St. Joseph maintains a hearding and day school for European children, teaching in come there up to the matriculation standard, orphanages for native children and a dispensary. Medical relief is afforded

to the civil population at the Cantonment General Hospital and a branch dispensary in the town.

KATOL TOWN.

Katol Town — The headquarters town of the Kátol tahsíl, Nágpur District, Central Provinces, situated in 21° 17′ N. and 78° 36′ E., on the Jám river, 36 miles west of Nágpur by road. Population (1901) 7,313. The suburb of Budhwára on the opposite side of the river has recently been included in its limits. Situated in the town are the ruins of an old fort, and a curious temple of very early date built entirely of layers of sandstone with many grotesque carvings. Kátol is not a municipality, but a town fund is raised for sanitary purposes. The town is one of the important cotton markets of the Province, and contains four ginning factories with 160 gins and 3 cotton presses, these factories having a total capital of about 5 lakhs. The mangoes grown locally have some reputation. Kátol has an English middle school and a dispensary.

KELOD.

Kelod.—A town in the Katol tahsil, Nagpur District, Central Provinces, situated in 21° 27° N. and 78° 53′ E., 28 miles from Nagpur on the Chhindwara read. The name is probably an abbreviation from keljkar, a plantain tree, as numbers of plantain groves were formerly planted here. Population (1901) 5,141. The town contains an old fort. Kelod is not a municipality, but a town fund is raised for sanitary purposes. A cotton ginning factory has recently been opened. The chief local industry is the manufacture of large brass water-vessels. Kelod has a vernacular middle school.

KHAPA.

Khapa.—A town in the Ramtek tahesi, Nagpur District of the Central Provinces, situated in 21° 25' N. and 79° 2' E., on the Kanhan river, 22 miles north of Nagpur, and 6 miles from the Chhindwara road. Population (1901) 7,615. The town is built on a site high above the river and immediately overhanging it, while on the land side it is completely shut in by fine groves. Khapa was constituted a municipality in 1867, and the average municipal receipts for the decade ending 1901 were Rs. 6,500. In 1903-04 the income was Rs. 9,000, octroi being the principal head of receipt. Thirty years ago. Khapa was described as one of

- the most flourishing towns in the N\u00e4gpur District, and its Khara. decrease in population is to be attributed to changes in the course of trade. Hand cotton-weaving, the principal local industry, was then thriving, but is now declining in prosperity owing to the competition of the mills. Kh\u00e4pa is not favourably situated for the location of ginning and pressing factories, and is therefore being supplanted by its younger rivals in the centre of the cotton area. Cotton cloths in various colours for women are principally woven. Two weekly markets are held here, and the town contains a vernacular middle and girls' schools, and a dispensary.

Mohpa.—A town in the Katol tahsil, Nagpur District, Monra-Central Provinces, situated in 21° 10° N. and 75° 50° E., 21 miles north-west of Nagpur by road. Population (1901) 5,336. Mohpi is not a municipality, but a town fund is raised for sanitary purposes. A cotton ginning factory with a capital of about Rs. 35,000 has been opened, and another is under construction. The town is surrounded by vegetable gardens, from which country vegetables are sent to Nagpur. It has a verme cular middle school.

Mowar.—A town in the Katol tahsil. Nagpur District, Mowah. Central Provinces, situated in 21°25' N. and 75°27' E., 53 miles north-west of Nagpur on the Wardha river bordering Berär. Population (1901) 4,790. Mowar was created a municipality in 1867, and the average municipal receipts during the decade ending 1901 were Rt. 3,600. In 1903-64 they were Rt. 4,000, the chief source of income being market-dues. It has a small dyeing industry, but with this exception the population is solely agricultural. The town is surrounded by groves and gardens on all sides except towards the river. A large weekly market is held here. Mowar has a verascular middle rehool

Nagpur City.—The hendquarters of the Nagpur Nagren District, and of the Central Provinces, situated in 21° p. City.
N. and 79° 7° E., on the Great Angian Peninsula Railway,
520 miles from Bombay, and on the Hengal-Nagpur Railway,
701 miles from Calcutta, the two lines meeting here.
The city stands on a small stream called the Nag, from which

NAGPUE CITY.

it takes its name. Its site is somewhat low, sloping to the south-east, with an open plain heyond, while to the north and west rise small hasaltic hills, on one of which is situated the fort of SITABALDI, on another the residence of the Chief Commissioner, and on a third the great reservoir which supplies the town with water. Nagpur is steadily increasing in importance, the population in the last four years of census having been: 1872, 84,441; 1881, 98,229; 1891. 117,014; 1901, 127,734. The population in 1901 included 104,453 Hindus, 17,368 Muhammadans, 436 Pársís, and 3,794 Christians, of whom 1,780 were Europeans and Eurasians. Nagpur was founded in the beginning of the 18th century by the Gond Raja Bakht Buland It subsequently became the headquarters of the libonala kingdom, and in 1861 of the Central Provinces Administration. The battles of Sitábaldi and Nágpur were fought here in 1917. Two small riots have occurred in recent years, one in 1896 at the commencement of the famine, and one in 1899 on the enforcement of plague measures, but both were immediately suppressed without loss of life. Nagpur itself possesses no archeological remains of interest, but some sculptures and inscribed slabs have been collected from various parts of the Province in the Museum. The city is also singularly hare of notable buildings, and since the Bhonsla values was burnt down in 1864, there is nothing deserving of mention. residence of the present representative of the family is situated in the Sakardará Bágh, about a mile from the city, where a small menagerie is maintained. But the two fine reservoirs of Ambajheri and Telinkheri to the west of the city, the Juma tolao (tank) between the city and the railway station, and the Maharajbagh and the Telinkheri gardens form worthy monuments of the best period of Bhonsla rule and have been greatly improved under British administration. The Maharajbagh also contains a menagerie. The hill and fort of Sítábaldí form a small cantonment at which a detachment of infantry, from the Kamptee garrison is stationed. Nagpur is the headquarters of two Volunteer Battalions, whoso combined strength in the station itself is five companies.

Nagpur was constituted a municipality in 1864, and NAGPUR the average municipal receipts and expenditure for the decade Municipal ending 1901 were Rs. 3,28,000. In 1903-04 the income undertakings. was Rs. 4,63,000, including octroi Rs. 2,31,000, water rate Rs. 34,000 and conservancy Rs. 26,000; and the expenditure was Rs. 4,51,000, the chief items being refunds Rs. 68,000, water supply Rs. 91,000, conservancy Rs. 65,000, upkeep of roads Rs. 15,000, drainage Rs. 14,000, and repayment of loans Rs. 22,000. The water supply is obtained from the Ambáiheri reservoir distant four miles from the town; the works were first constructed in 1873, the embankment of the old tank being raised 17 feet, and pipes laid to carry water to the city by means of gravitation at a cost of 4 lakhs. In 1890 an extension was carried out at a cost of 3 lakhs to serve the higher parts of the city and civil station which could not previously be supplied through want of sufficient head. The embankment was again raised by famine ·labour in 1900, and its present length is 1,038 yards, the greatest height being 35 feet. The catchment area of the tank is 64 square miles, and the water surface 412 acres. In order to prevent the waterlogging of the site of the city, which is liable to be a result of the constant intake from an extraneous source of supply, a scheme for a surface drainage system has now been undertaken. In addition to the drainage scheme a sewage farm is proposed, and the cost of the whole project is estimated at about 10 lakhs. A concession has recently (1903) been granted by the Municipal Committee for the construction of a system of electric tramway lines along the principal robde, r

Nágpur is the leading industrial and commercial town of Trade. the centre of India, its trade being principally with Bombay. The Empress Mills, in which Mr. J. N. Táta was the principal share-holder, were opened in 1877, and contain 1,400 looms and 67,000 spindles, their present capital being 47 lakhs. Their outturn of yarn and cloth for 1904 was valued at 61 lakhs, and they employ 4,800 operatives. The Swadeshi Spinning and Weaving Mills were opened in 1892 with a capital of 15 lakhs; they have 180 looms and 16,500 spindles,

Nagpur City. employ 1,100 operatives, and produced goods to the value of 14 lakhs in 1904. In addition to the mills twelve other cotton ginning and pressing factories containing 287 gius and eleven presses are now working, with a united capital of 16.47 lakhs. The city contains eleven printing presses with English, Hindí and Maráthí typo, and one English weekly and two native papers are published besides the Central Provinces Law reports. The principal hand industry is cotton-weaving, in which about 5,000 persons are engaged. They produce cotton cloths with silk borders and ornamented with gold and silver lace. Numbers of orange gardens have been planted in the vicinity of the town, and the fruit grown bears a very high reputation.

Officials and public institutions.

Nagpur is the headquarters of the Central Provinces Administration and of all the Provincial heads of departments, besides the Commissioner and Divisional Judge, Nagpur Division, a Deputy Postmaster-General, an Inspector of Schools, and Executive Engineers for Roads and Buildings and Irrigation. The Inspector-General of Agriculture for India, the Deputy Comptroller of Post Offices, Bombay Circle, and the Archdescon of Nagpur also have their headquarters here. It contains one of the two Provincial Lunatic Asylums and one of the three Central jails. Numerous industries are carried on in the Central jail, among which may be mentioned printing and binding, wood-work, including Burmese carving, cane-work and cloth weaving. All the forms and registers used in the public offices of the Province, amounting to about 10 million sheets annually, are printed or lithographed in the Nagpur jail, which contains 30 presses of different sizes. Agricultural department maintains a model farm which is devoted to agricultural experiment and research. The Victoria Technical Institute is now under construction as a memorial to the late Qucen. When finished it will take over the Agricultural and Engineering classes in theschools, and also teach various handicrafts. Nagpur is the headquarters of a Roman Catholic diocese and has a Cathedral and Convent. There is also a Mission of the Scotch Free Church, of which the Reverend Mr. Hislop, whose ethnographical and other writings on the Central Provinces are well

known, was for long a member. The Morris and Hislop Nagrum Colleges prepare candidates for degrees in arts; they are aided, but not maintained, by Government, and contained 207 students in 1903-04. The Morris College also prepares candidates for degrees in Law, and 12 students are taking this course. The other educational institutions comprise three aided high echools, containing together 404 students, and besides middle school branches attached to the high schools, four English middle schools, of which two are for Muhammadan and Telugu boys, respectively, and 15 primary schools. The St. Francis de Sales' and Behop's schools are for European boys, and the St. Joseph's Convent school for girls. They are attended by 520 children. The special institutions consist of male and female normal schools for teachers and the agricultural school. The two first train students to qualify for teaching in rural schools. They are entirely supported from-Provincial revenues, and contain 59 mule and 19 female students, both classes of whom receive stepends or scholarships. The agricultural school has 12 students; it is connected with the model farm and gives instruction regarding improved methods and implements of agriculture to subordinate Government officials and the sons of landowners. medical institutions comprise the Mayo and Dufferin hospitals for males and females, with combined accommodation for 112 indoor patients, and 9 other dispensaries.

Narkher.—A town in the Katel tale if of Nagpur District, Central Provinces, situated in 21 28' N. and 78' 32' E., 45 miles north-west of Nagpur by road through Kalmushwar and Sawargaon. Population (1901) 7,726. Narkher is not a municipality, but a town fund is mised for sanitary purposes. The population is almost solely agricultural, and the lands surrounding the town are very rich, the revenue of Narkher village being the highest in the Nagpur District. A large weekly cattle market is held here, and the town contains a vernacular middle school

Ramtok Town.—The headquarters town of the Ramtok taheil, Nagpur District, Central Provinces, situated in 21° 21' N, and 73" 20' E., 24 miles northeast of Nagpur by

RANTER TOWN, RANTEE TOWN. road and 13 miles from Sálwa station. Population (1901) 8,732. The town lies round the foot of a detached hill forming the western extremity of the small Ambagarh range. As is shown by its name (the hill of Rama or Vishun) it is a sacred place of the Hindus. On the hill, standing about 500 feet above the town, are a number of temples, which, owing to their many coats of white-wash, can be seen gleaming in the sunshine from a long distance. The principal temple is that of Ram Chandra standing above the others in the inner citadel, which is protected by two lines of walls, both of recent origin, while a third-line raus round the Ambala tank at the foot of the hill. The tank is lined throughout with stone revelments' and steps; it is said to be very deep and fish abound in From the west end of the tank a long flight of steps leads up the hill, at the opposite end of which another flight descends to the town of Ramtok. About 27 tanks in all have been constructed round the town. Rámtek was constituted a municipality in 1867, and the average municipal receipts for the decade ending 1901 were Rs. 8,400. In 1903-04 the receipts were Rs. 10,000 and were derived mainly from octroi. A large religious fair is held here in December and a smaller one in March. The December fair lasts for 15 days and a considerable amount of traffic in cloth and utensils takes place, dealers coming from Jubbulpore and Mandlá. A considerable area in the vicinity of the town is covered with betel-vine The variety called kapari is chiefly grown, and is much esteemed locally. The importance of the town is now increasing, owing to the manganese mines which are worked in the tract adjoining it. A weekly cattle market is The educational institutions comprise an English middle, girls' and branch schools, and a dispensary has also been established.

Szortn.

Saoner.—A town in the Nágpur talisil and District, Central Provinces, situated in 21°28' N. and 78° 55' E., 23 miles north-west of Nágpur on the Chhindwara road. The town is built on both sides of the Kolár river, the people on the northern hank consisting of Maráthás, and those on the southern of Lodhás, Kirárs, and other immigrants from northern India. The present name is a corruption of the

old one of Saraswatpur or the city of Saraswati, the goddess Population (1901) 5,281. The town contains of wisdom. an old temple constructed of large blocks of stone without mortar, and the rains of a fort ascribed to the Gaolis. Saoner was constituted a municipality in 1867, and the average municipal receipts for the decade ending 1901 were Rs. 2,800. In 1903-04 the income was Rr. 5,000 and was derived mainly from a house tax, market dues and reals of land. The town is an important cotton-mart and possesses three ginning factories containing 108 cotton gins, two of which are combined with cotton presses. The united capital of these factories is about 41 laklis, and two of them have been opened since 1900. The Saoner ginning factory was started in 1883 and was the first factory in the Nagpur District. A hand-dycing industry is also carried on, in connection with which al (Morinda citrifolia) was formerly cultivated round the town. A few trees are still left A large weekly cattlemarket is held here, and Saoner contains an Linglish middle rehool and branch schools. A dispensary is maintained by the Mission of the Scotch Free Church.

Sitabaldi.—A small hill and fort in Nagpar City, Control Provinces, situated in 21° 9' N. and 7° 7' E. It was the rown of an important action in 1817. War between the British and the Peshwa of Poons had begun on the 14th November, but Appa Schib, the Bhonsla Rájá of Nagour, was nominally in alliance with the Berlish and Mr. (afterwards Sir Richard) Jenkins was Resident at his court. On the 21th November, however, Appa Sibib received in public darbar a golden standard sent by the Penhwa are the title of general-in-chief of the Maráthá armies. This was held to be a declaration of hestility, and the subsidiary force at Naggar, consisting of the 20th and 24th Madras infantry, both very week, 3 troops of Bengal cavalry and 4 six-pounder gaus occupied Sitibaldi, a position consisting of two eminencies joined by a narrow neek of ground about 300 yards in length, that to the north being smaller than the other. during the night of the 26th November and the following day they were attacked by the Nagpur troops consisting of 18,000 men, of whom a quarter were Arabe, with 36 gams. Numerous

SAOSER.

SITE ALDI.

SITABALDI.

charges were repulsed, until at 9 a. M. on the 27th the explosion of an ammunition eart threw the defenders of the smaller hill into confusion, and it was carried by the enemy. The advantages afforded by the position to the British troops had now to a large extent been lost, the larger hill being within easy musket-range of the smaller. Officers and men were falling fast, and the enemy began to close in for a general assault on the position. At this critical moment the cavalry commander Captain Fitzgerald formed up his troops ontside the Residency enclosure below the hill, where they had been waiting, charged the enemy's horse and captured a small battery. The dispirited infantry took heart on seeing this success, and the smaller hill was retaken by a combined effort. A second cavalry charge completed the discomfiture of the enemy, and by noon the battle was over. The British lost 367 killed and wounded. In a few days the Resident was reinforced by fresh troops, and demanded the disbandment of the Nagpur army. Appa Súhib himself surrendered, but his troops prepared for resistance, and on the 16th December was fought the battle of Nagpur over the ground lying between the Nag river, the Sakardara tank and the Sonegaon road. The Maráthá army was completely defeated and lost its whole camp with 40 elephants, 41 guns in battery, and 23 in a neighbouring depôt. The result of this battle was the cession of all the Nagpur territories north of the Narbada, and northern Berar.

UMBER TOWN, Umrer Town.—The headquarters town of the Umrer tahsil, Nágpur District, Central Provinces, situated in 20° 52′ N. and 70° 20′ E., 29 miles south-east of Nágpur on the metalled road to Múl in Chánda. Population (1901) 15,043. Umrer is the 11th town in the Province in size. It contains a Maráthá fort and an old temple inside it with walls 17 feet thick, which is supposed to have been built by Rájá Kárn Sáh of Chánda in the sixteenth century. Umrer was created a municipality in 1867, and the average municipal receipts during the decade ending 1901 were Rs. 17,400. In 1903-04 the income was Rs. 21,000, and was principally derived from octroi. The staple industry of Umrer is the weaving of cotton cloths with silk borders

by hand. White loin-cloths with red borders are generally woven, the thread being dyed with lac. About 10,000 persons Umrer possesses English are dependent on the industry. middle, girls' and private Urdú schools, and a dispensary. A small weekly cattle-market is held here.

UMRER Town.

Chanda District.—The southernmost District of the CHANDA DISTRICT. Central Provinces, belonging to the Nagpur Division, and Boundaries, situated between 18°42' and 20°52' N., and 78° 48' and 81° configuration, and hill and E., with an area of 10,156 square miles. It is bounded on river systems. the north by the Nandgaon State and the Bhandara, Nagpur and Wardba Districts; on the west and south-west by the Yeotmál District of Berár and the Nizám's dominions; and on the cast by the Bastar and Kanker States and the Drug The shape of the District is an irregular triangle with its base to the north and tapering to the south, where the long narrow strip of the Sironchá tahsíl runs down beside the Godávari river. The Wardha, Pranhita, and Godávari rivers successively mark the western border, while to the north the Wunna divides Chanda from the Wardha District for a short distance previous to its junction with the Wardha river. The western portion, between the Wardha and Erai rivers, and a small strip along the north consist of undulating open country. East of this, to the Wainganga, the surface is generally broken either by isolated hills or small ranges, large areas are covered with forest, and the soil is generally sandy. The Waingangá flows from north to south through the centre of the District to its junction with the Wardha at Seoni, when their combined streams become the Pranhita. The greater part of the country east of it is included in the zamindári estates, and consists of an elevated plateau stretching from north to south along the entire length of the District. from which again rise numerous ranges of hills, while dense masses of forest extend over plateau and valleys alike. As already noted, three of the leading rivers of the Province, the Wardha. Wainganga and Godávari, are included in the drainage system of Chanda, while the Sconath, the largest feeder of the Mahanadi, rises in the north-eastern zamindaris. Each of these streams has numerous tributaries, the most important of those joining the Weinganga being the Andhari, the Botewahi, the

CHANDA DISTRICT. Dení, the Garhví and the Kobrágarhí, which with the main river carry off the drainage of the central and castern portion of the District. The chief affluents of the Wardhá are the Pengangá and Erai, while the Bandiá drains the south-eastern zamíndáris and joins the Indrávati. West of the Waingangá the principal hills are the Chimur, Múl and Pherságarh ranges, and east of it those of Surjágarh and Típágarh. The general height of the plain country is about 900 feet above the sea in the north of the District, falling to 658 feet at Chánda and 406 at Sironchá. Except in the open country on the west and north the whole District is thickly wooded.

Geology.

East of the Wainganga gneissic rocks constitute the principal formation, granite, gneiss and quartz being the typical rocks. To the west of that river the District is mainly occupied by rocks of the upper Gondwana system, consisting of red clay and soft sandstone, covered by coarse loosely-compacted sandstone and shale. Animal remains have been found in three well defined seams of limestone. The Wardha valley coal field occurs in this District and occupies a belt of 75 miles along the Wardha river, and an area of about 1,000 square miles.

Botany.

The forest vegetation in the District is of a mixed character. Teak (Tectona grandis) is fairly general, but is not anywhere very plentiful. The principal trees are saj (Terminalia tomentosa), bijásál (Pterocarnus-marsupium), rohan (Soumida febrifuga), kaddam (Stephegyne parvifolia), haldu (Adina cordifolia), semur (Bombax malabaricum) mahui (Bassia iatifolia)...dhauid (Anoneissus lithyeria); lendú (Diospyros melanoxylon), garári (Cleistanthus collinus), and palás (Butea frondosa). Salai (Boswellia serrata) is very abundant on the dry hills and plateaux; other trees met with are behrá or tinwood (Chloroxylon Swietenia), reunjhá (Acacia leucophlaa), baherá (Terminalia belerica), siris (Albiczia odoratissima), kaikrá (Garuga pinnata), moyen (Odina Wodier), ghant or mokhá (Schrebera swietenioides), pader (Stereospermum chelonoides), anjan (Terminalia arjuna), and nirmali potatorum). Near (Strychnos villages tamarinds and mangoes abound, and in the south of the District groves of the palmyra palm (Borassus flabelliformis) occur.

Almost all the wild animals belonging to the Central Provinces occur in the Chanda District, with the probable Fauna. exception of the hunting leopard. Tigers and panthers are comparatively frequent and bears are common in parts. The bison occurs in suitable forests. The buffalo is only found in the Ahiri zaminduri and part of the Ghot pargaua. Sambar are fairly numerous in suitable forests, but spotted deer comparatively rare. The bardsingha or swamp door is found in Ahiri in small numbers, and the mouse deer in the same forests. Black back are decreasing in numbers in the open country on the west. In the Ahiri range is found the large maroon squirrel. Wild pig are numerous, and large packs of wild dogs have been most destructive to the game. All the usual game

CHANDA

The climate is slightly hotter than that of Nagpur, and Climate and the heat of the summer months is trying. On the whole, however, the climate is healthy, and for a rice District malaria is wonderfully rand. The autumn months are as usual the most unhealthy.

birds are also found, and duck and snipe visit the District in

considerable numbers in the cold season.

The average annual rainfall is 51 inches at Chanda and Rainfall. 46 at Warorá. Failures of rainfall have been very infrequent.

Bhándak, a village near Chánda, was possibly the capital History. of the old Hindu kingdom of Vákátaka, embracing the modern Province of Berar and the parts of the Central Provinces south of the Narhadá and east as far as the Waingangá. Inscriptions show that this kingdom existed from the fourth to the twelfth centuries, or until shortly after the rise into power of the Gond dynasty of Chanda. The Gonds probably became prominent between the eleventh and twelfth centuries on the mins of the old Hindu kingdom. The names of nineteen kings are given as having reigned from the foundation of the dynasty to 1751. The Chánda kings are called the Ballar Sáhi fatilità after Sarjá Ballár Sáh, the ninth prince, who may have lived in the beginning of the fifteenth century, and who assumed this title after proceeding to Delhi. The eleventh prince, Hir Sáh, huilt the Chánda citadel, and completed the city walls which had been founded by his predece-sor. His grandson, Kárn Sáh, was probably the first of the line to adopt

CHANDA DISTRICT.

The son of this Karn Sah is mentioned in the Hindu faith. the Ain-i-Akbarí as an independent prince, paying no tribute to Delhi, and having an army of 1,000 cavalry and 40,000 infantry. From the time of Akbar until the days of the Maráthas, the Chanda princes seem to have been telerably independent and powerful, for both in their own annals and in those of the Deogarh line, we find them recorded as gaining an important victory over the latter rising Gond power in the middle of the seventeenth century. Probably it is to this period that may be referred the carvings of the Chanda device, a winged lion, which have lately been found on the walls of Gawilgarh, a famous hill-fortress on the southern brow of the Sátpurá range, which was for long the stronghold of Berár. The Gond kings of Chanda are shown by their architectural achievements, the seven miles of stone walls of Chanda, its fine gates, and its regal tombs, the stone embankment and remains of the palace on the Junona tank, and other buildings, to have attained a comparatively advanced degree of civilisation. Their rule was peaceful and beneficent, they extended cultivation and irrigation, and under them the District attained a degree of prosperity which has perhaps not since been equalled. In 1751 the Gonds were ousted, and the District passed under the control of the Marathas, forming from this period a portion of the Nagour kingdom. Chanda with Chhattisgarh was allotted in succession to the younger brothers of two of the Bhonsla Rajás, and under their wasteful and rapacious government the condition of the District greatly deteriorated. In 1817 occurred the rebellion of Appa Sahib, and in support of his cause the zamindar of Ahiri garrisoned Chanda against the British, while an army despatched to Appa Sahib's assistance by the Peshwa of Poona reached the Wardha river ten miles west of Chanda. It was attacked and defeated by two British brigades at Pándharkawadá in April 1818, and the British forces then proceeded to Chanda and, after a few days' siege, carried the town by assault, the regular garrison falling to a man in its defence.

From 1818 till 1830 the District was administered by British officers under Sir Richard Jenkins, and subsequently

made over to Raghují III, the last Bhonsla Rájá. On his CHANDA death without heirs it lapsed to the British Government in 1853. During the Mutiny the two petty zamíndárs of Monumpallí and Arnalli with Ghot rebelled, and raised a mixed force of Gonds and north-country Rohillas. Two telegraph officers encamped on the Pranhitz were murdered. The disturbance was put down, and the rebel zamindárs captured, largely by the aid of Lakshmi Bai, zamindár of Ahiri. As a reward she received 67 villages of their forfeited territories, comprising the Ghot pargana which the zamíndár of Ahiri holds in ordinary proprietary right. The descendant of the old Gond ruling family still lives in Chánda and receives a small political pension, first granted by the Maráthás and continued by the British. In 1860 the British Government obtained by cession from the Nizám his possessions on the left bank of the Godávari consisting of six táluks, and these were formed into the Upper Godávari District of the Central Provinces. In 1874 the Upper Godávari District was abolished, and four táluks became the Sironchá tahsil of the Chanda District, while the remaining two were incorporated with the Madras Presidency. It has been decided to transfer three of these taluks to Madras.1

Chánda is rich in antiquarian remains, the most important Archaelogy. of which are described in separate articles. Of the others but a bare list can be given. They include the cave temples at Bhándak and Winjbásani, Dewála and Ghúgus; the rock temple in the bed-of-the Wardhá below Ballálpur, which during the flood season is several fathoms under water; the ancient temples at Markanpi, Nerí, Warhá, Armorí, Deotek, Bhatála, Bhandak, Wairágarh, Wághnak, Kesláborí, and Ghorpeth; and the forts of Wairágarh, Ballálpur, Khatorá and Segaon.

The population of the District at the last three enumerations The people has been as follows: 1891, 649,146; 1891, 697,610; 1901, 601,533. Between 1881 and 1891 the growth of population was 7½ per cent. During the last decade the population has decreased by nearly 14 per cent. The District had poor crops both in 1896 and in 1897, and was very severely affected by

<sup>&#</sup>x27;This transfer had been sanctioned and the arrangements for it were under consideration at the time of writing (1906).

CHANDA DISTRICT. famine in 1900. The largest decreases were in the zamíndáris of the Chánda and Bramhapurí tahsíls, which lost by 15½ and 21½ per cent., respectively, while the decline in the Bramhapurí tahsíl outside the zamíndáris was 20 per cent. In the Sironchá tahsíl the jorár crop did not fail in 1897, and the people gained by the high prices prevailing for produce. The District has two towns Chanda and Warona and 2,584 inhabited villages. The principal statistics of population, based on the census of 1901, are shown below:—

Tah-fi.	Area In equare miles.	Numt Towns.	Vit- lages		tion mar	l'er e e u t- age of var- lation in population between 1601 and 1901,	Number of

The transfer of the táluks of Nugur, Albáka and Cherlá of the Sironchá tabsíl covering an area of 593 square miles and containing 142 villages with 20,218 persons to the Madras Presidency, which was under contemplation in 1906, has been allowed for in the statistics given above. In 1905 the Ahiri zamíndári was transferred to the Sironohá talisik and a now tahsil was formed at Garhelifolf containing the zamirylaris of the Bramhapuri tahsil and those of the Chanda tahsil except Ahiri, with a strip of non-zamindaii area. The corrected District figures of area and population are 10,156 square miles and 581,315 persons. The statistics given in the remainder of this article are for the District as it stood before the transfer of territory with the exception of those of density and number of villages. The density of population per square mile is 57 persons, being the lowest in the Province. The open country is fairly well populated, but the large zamindári areas are for the most part covered with forest and contain very few inhabitants. About 77 per cent. of the population are Hindus and 21 per cent. Animists. Muhammadans

number more than 10,000, of whom about a quarter Chanda live in Chánda and Warorá. There is great diversity of landers. The population speak Maráthí, more than 16 per cent. Gondí, 12 per cent. Telugu, and 5 per cent. the Chhattísgarhi dialect of Eastern Hindí. The Telugu population resides principally in the Sironchá tahsíl, but numbers of persons belonging to Telugu castes are found in several large villages of the Chánda tahsíl. The speakers of Chhattísgarhi belong chiefly to the Ambágarh-Chaukí zamíndári in the north-east corner of the District, which adjoins Nándgaon. The Maráthí speakers live all over the open country, while the forests east and south of the Waingangá are populated chiefly by Gonds.

Bráhmans number 5,000 persons and are the largest Their castes Kunbis (95,000) and Maráthás (1,500) and occupalandholders. together form 17 per cent. of the population. Kohlis number 7,000, but with the decay of sugarcane cultivation and the repeated failures of rice, they have fallen into poor circum. Other numerous castes are Ahirs or herdsmen (17,000), and Telis or oil-pressers (32,000), both of whom are now engaged principally in cultivation. Gonds (135,000) form 221 per cent., or nearly a quarter of the whole population. ·The Mária Gonds are almost a separate race. They are generally tall and well built, in great contrast to the ordinary type of Gond - Their marriage is adult, and the consent of the girl is essential; sexual license before marriage is an ordinary custom, but after marriage husbands not infrequently murder their wives, if they discover that the latter have been unfaithful. In a District with so many rivers, Dhímars (31,000) or fishermen are naturally numerous and form about 5 per cent. of the population. They are generally in poor circumstances, as also are the impure menial caste of Mehras (74,000), who constitute 12 per cent. The whole of the: Sironchá tahsíl is held by a superior proprietor of the Velamá caste, who resides in Hyderábád. About 70 per cent. of the population were returned as dependent on agriculture in 1901.

Christians number 266, of whom 204 are natives Christian The Church of Scotland supports a Mission in Chanda with Missions.

Chanda District. four schools, while in Sironchú the American Methodist Mission, founded in 1893, has several schools principally for the depressed Dher boys.

General agricultural conditions Black soil is found in the tracts adjoining the Wardhá river, and in the doáb between the Wardhá and Erai comprising most of the Warorá tahsíl, and north of Chimur. An alluvial belt of black soil mixed with sand also occurs on the banks of the Waingangá. Elsewhere the yellow soil formed from metamorphic rock is generally prevalent. Inferior sandy and stony soils cover a large area in the zamíndáris. In Sironchá tahsíl a good deal of alluvial black soil is found on the banks of the Godávari. Linseed, gram and wheat are grown principally in the black soil lands of the Chánda Havelí and those adjoining the Wardhá river, while jowór is the principal crop in Sironchá and the Warorá tahsíl, and rice in the centre and cast of the District.

Chief agricultural statistics and crops. 'An area of 4,851 square miles, amounting to 43 per cent of that of the District is included in the 20 zamíndáni estates, while 9,000 acres are held free of revenue and 8,000 have been sold outright under the Waste Land Rules. More than 300 square miles have been allotted for settlement on the ryotwári system, of which 55 square miles are cultivated and pay a revenue of Rs. 21,000. The principal statistics of cultivation in 1903-04 were as shown below, areas being m square miles:—

Talisfi		Total.	Culti- vated.	Irrigated.	Cultur- nblo waste.	l'orests.
Chánda Warorá Brambapurí Sironchá Garhchirolí Total		1,174 1,282 897 3,095 3,708	293 516 202 86 426 1,512	41 25 56 6 51	367 366 300 279 1,104	551 846 443 450 819 2,672

Considerable areas of land are at present under old and new fallows. Rice covers 355 square miles, joude 349 square

<sup>1</sup> In the statistics of cultivation and culturable waste here given 2,014 square miles of waste land in the zamfudari estates which have not been cadastrally curveyed are excluded from the total area of the District.

miles, linseed and til 95 square miles each, cotton 79 square Chanda miles, wheat 67 square miles and gram 31 square miles. In Distrator. recent years the acreage of the wheat crop has fallen by a half, while that of jowar has increased by more than 50 per Jovár is grown both as an autumn and spring crop, the latter predominating. Cotton is also grown both as an autumn and spring crop, the latter practice being followed in the rice country in the same manner as with jowar, the reason in both cases probably being to avoid the deleterious effect which is produced on the plants by a heavy rainfall. spring cotton is said to have the stronger staple. Til has become a crop of some importance in recent years. Less than 1,000 acres are now under sugarcane; its cultivation has decreased with the unfavourable seasons, owing to the inability of the local product to compete in price with that from northern India. Bhándak and the adjoining village of Chichordí contain a number of betel-vine gardens, and the leaves produced are of good quality. In the zamindaris the Gonds still practice dahiá or shifting cultivation. A plot of ground is covered with brushwood, four to six inches deep. This is fired just before the rains, and, when they break, rice is scattered broadcast In the second year a small millet is sown, among the ashes. and the land is then left fallow for ten years, as the available timber fuel near it has been exhausted, and its transport from a distance is extremely laborious. Rents are paid by the axe of land, which is roughly about an acre.

The area of the valuable cotton crop has nearly trebled Improvements in the last few years, while manure is now more largely practice. applied both to rice and cotton. In the decade ending 1904 Rs. 92,000 were taken under the Land Improvement Loans Act, principally for the construction of irrigation tanks, and 51 lakhs under the Agriculturists' Loans Act.

As regards irrigation Chanda is second only to Bhandara Irrigation. in importance. In a normal year nearly 280 square miles, or 22 per cent. of the cropped area, are irrigated. In 1903-04 the area was 180 square miles. About 7,000 acres of this consists of garden crops and sugarcane, and the remainder of rice. Irrigation is applied in the usual manner from tanks, both by percolation and by cutting an outlet in the embankment

CHANDA DISTRICT.

and carrying the water to the fields in mud channels. very few of the largest tanks are provided with an inferior masonry outlet, but most of them have no sluices or permanent waste-weirs. The supply of water is dependent on a sufficient quantity of rainfall to fill the tanks, and in years of complete drought only a quarter of the ordinary area can be irrigated. There are nearly six thousand tanks in the District with an ordinary capacity of irrigating an average of 24 acres each, and about 1,600 wells, which supply an acre and a half each. The best tanks are situated in the tract north of Múl on both sides of the Nagpur road. Profitable schemes for tanks to irrigate an additional 100,000 acres at a cost of about twenty lakhs have been prepared by the Irrigation department, in addition to a number of other protective projects. A scheme for a canal in the dodb between the Wainganga and Andhari rivers has been suggested.

Cattle, ponies and sheep.

Cattle are bred all over the District in the forest tracts, the bulls being selected and kept for breeding. Those used for rice cultivation are small and usually white, while in the springcrop country large bullocks, like those of Berár, and usually red and white or reddish brown in colour, are employed. There is a considerable difference in the price, and also in the working life of the two breeds, those used in the rice country being much cheaper, and owing to the severity of the work shorter livedthan the others. Buffaloes are used for the carriage of the tice plants in transplantation, but they are not much in favout. Most of the ghi produced is froin huffalo's milk. Goals and sheep are kept in large quantities in Chanda, the number of sheep being greater than in any other District of the Central Provinces except Raipur They are kept by the professional shepherd castes of Dhangars and Kuramwars, and the manure which they afford is valuable. In Sironchá there is a special breed of large straight-haired sheep, generally white and sometimes reddish brown in colour They grow to three feet high at the shoulder, and give two to four pounds of milk which is used for the manufacture of oht. The rams are used for fighting, and matches are arranged on festivals.

Forests.

The Government forests of Chanda cover 2,672 square miles, or about 26 per cent. of the area of the District. In

addition to this the zamindárí and málguzári forests cover CHARDA 3,919 square miles. The forests are well distributed and District. very few villages are more than three miles from some part of them. The most important tracts are the Ahiri rango which supplies teak for export, and the Mohurlí and Havelí ranges which supply the Warora colliery with pitprops, fuel and charcoal. The ordinary species of trees found have already been described. The extensive bamboo forests west of the Wainganga seeded in 1900, but most of the seed was destroyed by an insect, so that there has been little reproduction. A considerable quantity of lac was formerly gathered, but it was recklessly taken for sale during the famine, leaving no wood for stock, and the supplies have consequently been depleted. The forest revenue for 1903-04 amounted to about 2 lakhs, of which Rs. 75,000 were realised from sales of timber and Rs. 55,000 from grazing fees.

A collicty has been worked by Government at Warora in Mincrula. the Wardha valley coal-field since 1871, and the output of coal in 1901 was about 112,000 tons, which sold for 5.2 laklis, the net carnings being nearly 2 laklis. persons are employed in the colliery. The coal is sold to the Great Indian Peninsula Railway, to municipalities for water works, and to cotton mills and gibning factories. The seams worked by this colliery are nearly exhausted. Another coal-field exists at Bandar about 30 miles north-east of Warora, which contains three seams with a total thickness of 38 feet. Seams have also been found at Ballalpur, six miles south of Chanda, at Dudbolí, a village near it, and at Ghugus on the Wardhi river. Tost borings have been made at Ballalpur by Government, but owing to the proximity of the river much difficulty has been found in sinking the pits. A prospecting license has been granted for Dudholi. There are old copper mines at Thanwasana in the Ghatkul tract, at Govindpur poar Tulodhí, and at Mendhá near Rajolí. Iren ores of good quality. secur, the best known localities being Dewalgaen, Gunjewahi, Lohára, Pipalgaon and Ratnapur. The ores at Lohára and Pipalgaon contain 69 and 71 per cent. of iron respectively. About 1,150 tons of iron were extracted in 1904 by primitive charcoal furnaces, but the industry is not prosperous. Diamond

CHANDA DISTRICT. mines formerly existed on the Satti river, a tributary of the Kobrágarhi near Wairágarh, and gold dust is obtained by washing in the Wainganga and Indravati rivers. Good building stone is found in several localities, and red, yellow and white clay at Chanda. Limestone brought from Berar is burned at Bhandak, and lime is also propared at Ratnapur near Gadborí and Nawegaon.

Arts and Manufactures.

The tasar silkworm is bred by Dhimars in the forests of the Wairagarh and Sindowahi ranges, and silk is woven by the caste of Koskatis at Chamursi and one or two other villages. It is principally used for turbans. Silk loin clothe and cholis or bodices for women are woven by a few houses of Patwis at Chanda with thread obtained from Bengal: they are usually red or yellow in colour. The weaving of silkbordered cotton cloths is a considerable industry, and the produets of Chanda were formerly exported over a large area. Chánda, Chimur and Armorí are the principal centres, but there are a number of weavers in all the large villages in the north of the District. The cloths are sometimes embroidered with gold and silver thread. Ordinary coarse cotton cloth is woven by large numbers of Mahars, from mill-spun thread. The better class of coloured cloths are woven with thread dyed in the mills, but thread is sometimes dyed black locally with imported indigo. The inferior cloths are dyed red and blue in the ordinary manner by Chhipas and Rangáris, the principal centres being Cháuda, Múl, Saoli, and Brumhapuri; but only the poorer classes wear cloths dyed by indigenous methods as they have a peculiar odour. Gold and silver ornaments of a special pattern are made at Chanda, specimens of which were sent to the Dolhi Exhibition. They are made with a base of silver on which are fixed pieces of lacquered wood of different patterns, the surface being then covered with gold leaf. Bruss and copper vessels are made at Chanda and Nori in the Brambapuri tabsil, and also ornaments of a mixture of three parts of brass and one of zine, which are worn by the poorer classes. Good lacquer work is turned out at Pomurni. Articles of bamboo wood are also lacquered at Chánda. Ornamental slippers are made at the same place; patterns being worked on them with silk thread.

Waters has a fire-clay brick and tile factory worked by Chasna Government in connection with the colliery, and two collon Distract. presses and four ginning factories have been opened in the last few rears.

The principal exports by rail are oilseeds, timber, hides Commerce. Rice goes chiefly by eart to and horns, cofton and pulses. Berát, Hyderábád, and Wardhá. Small quantities of wheat are sometimes sent by road from the Brainbayuri tabeil to Nagpur. The oilseeds are linseed, fel, castor and mustard, while esakui oil is now an important product. Cotton has only come into prominence in the last few years. Large quantities of teak-wood are sent from Alapillar and from the northern zamindáris by real. Bamboos, gum, myraholams, and he are also experted from the forest near the railway. Grass and charcoal are sometimes taken from the northern zamindáriz forsale in the Raipur District. Sámiar horns are exported for the manufacture of knife-handles. The flowers of the realised are sent to Wordh's and Berge. Superior bricks and tiles are made in the Wamni colbery, and are sol! locally and also sent out of the District. Silk-hordered cloths are largely exported to Nagpur, Berar and Hyderabad Leather show and ropes are rent to Beráras Salt, sugar, thread, extlon piece-goods, metals and kerosene oil are the principal imports. The salt used is sea calt from Bomlay. Sugar comes principally from the Mauritius, and to a less extent from northern India. Ger or aurelined rugat 14 largely imported from Bangalore and northern India, the whole trade having sprung up within the last ten years.

The Wardha-Warora branch of the Great Indian Popin- Relicate and rula Railway enters the moth-worten corner of the District Emis with stations at Negri and Warord. An extension of the railway through Chanda to the coal-mineral Ballilpur is now (1905) under construction. Nearly the whole external trade of the District is through Warreri station. Warers is connected by medalled roads with Chinda and Chimur, and by an unmetalled one with Wun in Berat. The Mul and Stronghi roads are the mord important routes leading from Chanda to the interior of the District. In the rainy casen some produce is carried by best on the Wainpaperi between Blanchina and

CHANDA DISTRICT. Armorí, and during the famine grain was brought down to Garchirolí. The length of metalled roads is 79 miles, and of unmetalled 398, and the annual expenditure on maintenance is Rs. 54,000. The Public Works department has charge of 298 miles of road and the District council of 179. Avenues exist on 58 miles. Considering its size the District is not well provided with roads.

Famine.

Previous to the last decade there is little record of distress in Chanda. The District suffered in 1868-69, but not so severely as other parts of the Province, and little or no relief appears to have been given. From this date conditions were generally prosperous until 1891-92, from which year there were successive short crops until 1896-97, caused in three years by cloudy and rainy weather in the winter months, and in three years by premature cessation of the monsoon rainfall. The failure of 1896-97 was not in itself severe, as an average outturn of half the normal was obtained from all crops, but following on the previous lean years it caused some distress. Relief was principally given by granting loans for the construction and improvement of tanks. The mortality was never excessive. In 1899-1900 a complete failure of cropsoccurred and severe famine prevailed, aggravated by epidemics of cholera and dysentery arising from the scarcity of water, and 32 per cent. of the population were at one time on relief. Several road works were undertaken, 54 new tanks constructed, and 238 repaired or improved. The total expenditure was 44 laklus.

District subdivisions and staff.

The Deputy Commissioner is aided by four Assistant or Extra-Assistant Commissioners. For administrative purposes the District is divided into five tabsils, each of which has a tabsildar and naib-tabsildar. Owing to the extent of its forests the District has two Forest Officers, both of the Imperial service.

Civil and Criminal Justico.

The civil judicial staff consists of a District and one Subordinate Judge and a Munsiff at each of the Chánda, Warorá and Bramhapurí tahsíls. The Divisional and Sessions Judge of the Nágpur Division has jurisdiction in Chánda. The crime and litigation of the District are of the ordinary type.

Land Revenue administration.

During the ten years previous to the commencement of the British management the collections of land revenue averaged 3.34 lakhs. The practice was to give short leases for a man from 13 to 15 per cent. of the assets. Various miscellancous taxes and transit dues realised under the Maráthá administration were abolished when the District became British territory. The period of Maráthá administration from 1830 to 1854 was characterised by reckless mis-Many of the old hereditary headmen were dispossessed and their villages made over to Bráhman officials on a reduced assessment, while in order to make up the loss of revenue every device was employed to extort increased sums from those who remained. In 1862-63 when the first regular settlement was begun the demand had fallen to 2.65 lakhs. revision of assessment was concluded in 1869, the term fixed being 30, 20 and 13 years in different areas. The tract settled for 13 years consisted of certain villages in the Ghot parguna. The revised revenue was fixed at 2.64 lakhs, of which Rs. 22,000 were assigned, but this sum excludes Re. 59,000 on account of zamindári estates, and the revenue of the Sironchá tahsíl which then constituted a separate district. The village headmen were made proprietors and all tenants received occupancy rights. The Amgaon, Raj-

garh, Ghátkul and Wairágarh parganas, in which the revenue had only been fixed for 20 years, were summarily settled in 1886-88. On the expiry of the 30 years settlement, a fresh revision was undertaken in 1898, and is still (1905) in progress, its conclusion having been delayed

The collections of revenue have varied

period of 3 to 5 years, leaving the patel or village head-CHANDA

<sup>-</sup> The management of local affairs outside municipal areas Local Boards is entrusted to a District council and four local boards, each and Municipalities having jurisdiction over one tabsil, while the funds rangel for Sironcha are administered by the Deputy Commissioner.

Charda District. The income of the District council for 1903-04 was Rs. 54,000, and the expenditure on civil works was Rs. 11,000, on education Rs. 21,000 and on medical relief Rs. 5,000. Chanda and Warora are municipal towns.

Police and Jails The District Superintendent of Police is usually aided by an Assistant, and has a force of 663 officers and men including 3 mounted constables, besides 1,880 village watchmen for 2,584 inhabited villages. Chánda has a District jail with accommodation for 148 prisoners including 13 females, and Sironchá a subsidiary jail accommodating 53 prisoners. The daily average number of prisoners in the Chánda jail in 1004 was 61, and in the Sironchá jail between 3 and 4.

Education

In respect of education Chánda stands thirteenth in the Province, about 2 per cent. of the population (3.9 males and 1 females) being able to read and write. The percentage of children under instruction to those of school-going age is 8. Statistics of the number of pupils under instruction are as follows:—16.80-81, 3,670; 1890-91, 5,495; 1900-01, 5,278; 1903-04, 6,998, including 205 females. The educational institutions comprise a high school at Chánda conducted by private individuals, 3 English middle schools, 4 vernacular middle schools and 114 primary schools. There are four girls schools in the District. Three schools for boys and one for girls are conducted by the Chánda Mission. The expenditure on education in 1903-04 was Rs. 42,000, of which Rs. 38,000 were provided from Provincial and local funds and Rs. 4,200 from fees.

Hospitals and dispensaries

The District has 14 dispensaries, with accommodation for 53 in-patients. During 1904, 91,306 cases, of which 506 were those of in-patients, were treated in them, and 1,498 operations were performed. The expenditure was Rs 35,000, of which the greater part was provided from Provincial and local funds.

Vaccination.

Vaccination is not compulsory in any part of the District, and only \$2 per mille of the population were successfully vaccinated in 1903-04.

(Major Lucio Smith, Settlement Report, 1569. A District Gazetteer is being compiled.)

Chanda Tahsil.—The central tahsil of the Chanda Dis- Chanda triel, Central Provinces. In 1901 its area was 5,058 square TABSIL. miles and population 195,385 persons. In 1905 the constitution of the tabsil was entirely altered, the large Ahiri zamindári estate being transferred to the Sironchá tahsíl, and the remaining zamindari estates with a tract on the east of · Chánda to the new Garbchirolí tabsíl. The revised area of the Chánda tahsíl is 1,174 square miles and its population 121,040 persons. The population of the area now constituting the talisil was 132,477 persons in 1891. The density of population is 103 persons per square mile. The tabell contains one town, Chanda, the District and talish headquarters. population 17,803, and 319 inhabited villages. Excluding 554 square miles of Government forest, 59 per cent. of the available area is occupied for cultivation. With the exception of a small open black soil tract on the western border, the tabell consists of rice country and is covered over a great part of its area with hill and forest. The land-revenue demand of the new tabell was approximately Ra. 60,000 before the revision of settlement in progress in 1905.

· Warora Tahsil.-The morth-western tahsil of the Warora Chanda District, Central Provinces, lying between 19" 59' and Tanant. 20° 44' N. and 78° 46' and 79° 37' B., with an area of 1,282 square miles. The population in 1901 was 134,547, and in 1891 was 144,680. The tabell contains one town, Wanona, the tabsil headquarters, population 10,626, and 408 inhabited villages. The density of population per square mile is 105 persons. Excluding 246 square miles of Government forest, 71 per cent. of the available area is occupied for cultivation. The cultivated area in 1903-04 was 515 square miles. The landrevenue demand in the same year war Rs. 1,14,000 and that for derive Rs. 13,000. The greater part of the tabell is an open black soil tract in the valley of the Wardha river, bearing spring crops, and thus differing considerably from the rest of Chanda which is mainly a rice District, and resembling tather the adjoining District of Wardha.

Bramhapuri (Brahmapuri).-The northern talish of the Brandarums. Chanda District, Contral Provinces. In 1901 its area way

٢.

BRAMMARURI. 3,324 square miles and population 220,453 persons. In 1905 a new tahsil was constituted at Garhehiroli to which 2,527 square miles, including 15 zamíndári estates with a total area of over 2,000 square miles, were transferred from Bramhapuri, the Bramhapuri tahsil at the same time receiving a small accession of 100 square miles of territory from Chanda. The revised tótals of area and population of Bramhapurí tahsíl are 897 square miles and 115,049 persons. The population of the area now constituting the tahsil in 1891 was 144,157. The density of population is 128 persons per square mile, and the tabsil contains 340 inhabited villages. Its headquarters are at Bramhapuri, a village of 4,238 persons, 77 miles from Chanda by road. The tabsil contains 443 square miles of Government forest. The land-revenue demand in 1903-04 on the area now constituting the tabsil was approximately Rs. 82,000. Bramhapuri is almost wholly vice country and contains a number of fine irrigation tanks in the larger villages.

SIBONCHA.

Sironcha.—The southern talisil of the Chanda District. Central Provinces. In 1901 its area was 1,085 square miles and its population 51,148 persons. The transfer of the taluks of Nugur, Albáka and Cherlá of the Sironchá tahsíl, covering an area of 593 square miles and containing 142 villages with 20.218 persons, to the Madras Presidency had been sanctioned, but further details of administration were being considered in In 1905 an area of 2,603 square miles of the Chanda tahsíl, of which 2,600 were contained in the Abiri zamíndári estate, was transferred to Sironchá. The revised totals of area and population of the Sironchá talisíl are 3,095 square miles and 55,465 persons. The population of the area now constituting the tabsil in 1891 was 51,782 persons. The density of population is only 18 persons per square mile, and the tahsil contains 421 inhabited villages. Its headquarters are situated at Sironchá, a village containing 2,813 persons, 130 miles from Chánda by road. The area of Government forest in the new tahsil is 480 square miles, while 2,254 square miles of the Ahiri zamindári are covered by tree-forest, scrub-jungle er grass. The northern portion of the tabsil comprised in the Ahiri zamindári is one of the most densely wooded and sparsely populated areas in the Province; to the south of this, STRONCHA. Sironchá extends in a long narrow strip to the east of the Godávari, and consists of a belt of rich alluvial soil along the banks of the river and its affluents, with forests and hills in the background The population is wholly Telugu. The land-revenue demand of the tahsil was approximately Rs. 17,000 before the revision of settlement in progress in 1905.

Garhchiroli.—A tahsil of the Chanda District, Central Gameurwas formed by BOLL. 1905, Ιι Provinces, constituted in taking the zamindári estates of Bramhapuri, and those of Chanda, with the exception of Ahiri, together with 1,457 square miles of the khálsa or land held in ordinary proprietary right from the east of the Chanda and Bramhapuri tahvils. The area of the tah-il is 3,708 square miles, and the population of this area was 135,214 in 1901, and 207,728 in 1891. The density of population is 42 persons per square mile. The talksil contains 1,098 inhabited villages. Its headquarters are at Garhebiroli, a village of 2,077 persons, 51 miles from Chánda by road. The tahsil includes 19 zamindári estates, lying to the east and south of the Wainganga river, with an area of 2,251 square miles and a population of \$2,221 persons. Most of this area is hilly and thickly forested, the area of forest in the zamindaris being 900 square miles. Ontside the zamindári estates there are 849 square miles of Government forest. The land-revenue demand of the area constituting the tabeil was approximately Re. 41,000 in 1908-04.

Bhandak.—A village in the Warora tabail of Chanda Bhandak.

District, Central Provinces, situated in 20° 7′ N. and 70° 7′ E.,

12 miles from Warora station on the Chanda road. It has
been suggested that Bhandak was the capital of the old Hindu
bingdom of Vakataka or Berar, but the names are not
connected, and no inscriptions of the Vakataka rulers have been
found here. The numerous ruined demples and fragments of
sculpture and squared stones show that it must at one time have
been a great city. The most famous temple at present in
that of Badari Nag or the snake temple, the object of spiship
being a nog or cobra, which is said to make its appearance on

BRANDAR.

all public occasions. The temple itself is modern and has been reconstructed from older materials, many old sculptures being built into the walls. To the east of the village near the main road is a tank containing an island, which is connected with the mainland by an old Hindu bridge constructed of massive columns in two rows, with heavy beams laid along The bridge is 136 feet their tops to form a roadway. long and 7 feet broad. About a mile and a half to the south-west of Bhandak, in the hill of Bijasan, is a very curiously planned Buddhist cave. A long gallery is driven straight into the hill to a distance of 71 feat, and at the end of it is a shrine containing a colossal , Buddha scated on a bench. Two galleries lead off at right angles to the first and each of those has also its shrine and statue. From traces of inscriptions on the walls the date of the original excavations may be inferred to have been as early as the second or third century A. D. In Gaorára, a mile and a half to the south of Bhandak, are the remains of several temples, and caves and niches hollowed out in the rock for the reception of statues. The principal temple is called Johnása's palace and the two chief caves are called his big and little fowl-houses.

CHANDA TOWN,

Chanda Town.-The headquarters town of the Chánda District, Central Provinces, situated in 19° 57' N. and 78° 58' E., at an angle formed by the junction of the Erai and Jharpat rivers, and 28 miles from Warora, on the Great Indian Peninsula Railway. Population (1901) 17,803. The name is a corruption of Chandrapur, the city of the moon. Chanda was the capital of a Gond dynasty, whose supremacy lasted from the twelfth to the eighteenth centuries. The appearance of the city from without is most picturesque. Dense forest stretches to the north and east. On the south rise the blue ranges of Manikdrug. and westward opens a cultivated rolling country with distant hills. The town itself is surrounded by a continuous line of wall, crowned with battlements five and a half miles in circuit. with crenellated parapets and broad ramparts, traced in reentering angles and semi-circular bastious. The thickness of the walls is 10 feet, and for the greater part of the circuit they are in a good state of preservation. They were built by the Gond king Hir Sah, a contemporary of Akbar's,

and repaired by the Maráthás. They now form an efficient CHANDA protection against the floods which are not infrequently caused by the Erai river, when driven back by the swollen current of the Wardha at their junction. The walls are pierced by four gateways and five wickets. The most noticeable buildings in the town are some temples, and the tombs of the later The principal temples are those of Achaleshwara, Mahákáli and Murlídhar. They are generally plain with pyramidal roofs in steps, the only exception being the fane of Achaleshwara, the walls of which are covered with a multitude of small sculntured panels The tombs are plain substantial buildings, rather heavy in appearance. Outside the walls is the large Ramála tank, from which water is brought into the town in pipes constructed by the Gonds. Along the pipes at intervals are round towers or hathnis, at which the water can be drawn off and carried into small reservoirs. Ontside the town to the south-east, and lying on the ground, is a collection of colossal figures of Hindu deities carved from the basalt rock and left lying in situ. largest of them measures 26 x 18 x 3 feet. They are known as Rayappá's idols, and the story is that they were prepared by a wealthy Komati named Rayappá, who intended to build a gigantic temple to Siva, but died before he could complete it. The greater part of the space inside the walls is vacant, and some of it is sown with crops, though suburbs have grown up outside the walls.

Chánda was constituted a municipality in 1867, and the average municipal receipts for the decade ending 1901 were Rs. 32,000. The income has largely expanded in recent years, and in 1903-04 amounted to Rs. 48,000, being chiefly derived from octroi. The trade of the town is now much less than it was, but Chánda is still the commercial centre of the District. It has also several hand-industries, among which may be mentioned cloth-weaving either of silk, or of cotton with silk borders, dyeing, the manufacture of ornamental slippers, gold and silver work of a peculiar pattern, bamboo-work, and carpentering. A large annual fair is held just outside the Achaleshwara gate in the month of April, the total attendance at which is estimated at 100,000 persons. «Cattle, tobacco and

CHANDA TOWN. garlic are the principal articles sold. Chanda possesses a high school, supported by private subscription, with 63 students, an English middle and various other schools, and two dispensaries. The Episcopal Church of Scotland has established a mission station here, and maintains three schools.

MARKANDI.

Markandi.—A village containing 211 persons in the Garbehirolí tabsíl, Chánda District, Central Provinces. situated in 19° 41' N. and 79° 50' E., 50 miles south-east of Chánda by road. The village stands on a bluff overlooking the Wainganga, and is remarkable for an extremely picturesque group of temples They are enclosed in a quadrangle 196 feet by 118, and there are about twenty of different sizes and in different stages of preservation. They are richly and elaborately sculptured, and are assigned to the period of the 10th and 11th centuries. The wall surrounding them is of a primitive type, and probably much older. The largest and most elaborate temple is that of Markanda Rishi. There are also some curious square pillars sculptured with figures of soldiers and probably more ancient than the temples. A religious fair is held annually at Markandi in February and March lasting for about a month. The great day of the fair is the Sivarátri festival, when the attendance amounts to about 10,000 persons.

Warora Town.

Warora Town. - The headquarters town of the Warora tahsil, Chanda District, Central Provinces, situated in 20° 14' N. and 79° 1' E., two miles from the Wardba river. It is the terminus of the Wardhá-Warorá branch of the Great Indian Peninsula Railway, 45 miles from Wardha and An extension of the railway from Warora 517 from Bombay to a point beyond Chanda has recently (1904) been begun. Population (1901) 10,626. Warorn was constituted a municipality in 1867, and the average municipal receipts for the ten years ending 1901 were Rs 22,000. In 1908-04 the income had increased to Rs 32,000, being principally derived from octroi. Water is obtained from a large tank outside the town, and carried into it in pipes Waroin is the affition at which the bulk of the produce of the Chanda District, and much of that of the adjoining Ycotmál District of Beráx reaches the railway. A Government colliery has been worked

here for the last 35 years. In 1903-04 the output was 117,000 WARDRA The Town. tons of coal raised at a cost of Rs. 2-15-4 per ton. carnings for the year amounted to 5.4 lakhs and the expenditure to 3.7 lakhs, giving a return of 111 per cont. on the capital expenditure. The supply of coal is now almost exhausted. About 350 miners are employed. The coal is sold to the railway, and to the local mills and factories. In connection with the colliery a fire-clay brick and tile factory has been established, the output of which in 1904 was valued at Rs. 42,000. A ginning and pressing factory belonging to the Empress Mills, Nagpur, with 14 gins and one press was opened in 1903. It has a capital of about a lakh of rupees and dealt with cotton to the value of Rs. 55,000 in Another cotton press and three the first year of working. ginning factories have since been constructed. Warorá possesses English middle and girls' schools and two dispensaries.

Bhandara District.—A District in the Nagpur Division BRANDARA of the Central Provinces, lying between 20° 40' and 21° 47' N. and 79°27' and 80° 40' E., in the eastern portion of the Boundaries, Nagpur plain, and separated from that of Chhattisgarh by and hill and the Sátpurá range on the north, and by a line of broken hill and forest country further south. Through a narrow gap of plain between the hills on the north and south pass the Bengal-Nagpur Railway and the Great castern road. It is bounded on the north by the Balaghat and Sconi Districts; on the west by Nagpur; on the south by Chanda; and on the east by the Feudatory States of Chhuikhadan, Khairagarli and Nandguon. The area of the District is 8,965 square miles. The surface is generally open and level, being broken only in a few places by isolated ranges of hills. The lowest and most northerly of these is the Ambagarh range, an outlier of the Satpuras, which enters the District from the west, and trending in a north-easterly direction outs off the valley of the Bawanthari river from the rest of the District. Soon after entering Bhandara the ridge is crowned by the fortress of Ambagarh. In the centre, running from the east of Bhandara town to the railway near Gondia, is the Onikhuri ranges a cluster of low peaks surrounded by irregular

river systems.

Bhandana District. forest country. The points of Lendejhari (1,499 feet) and Jamri (1,712 feet) are the highest. Just west of Bhaudara the Ballabi range, consisting of a few sondstone bills capped with granite, and overhanging the eastern read, forms a prominent feature in the landscape. Lastly, in the southcast lie the Nawegaon or Partabgarh hills, the highest part of the District. Among them, under a seven-peaked mass, locally known as the hill of the seven sisters, is the Nawegaon lake, and on an outlying bluff of this cluster stood the old fortress of Partábgarh (1,842 feet). The peak of Nisháui is 2,314 feet high. In the extreme south-west near Pauni there is an isolated clump of hills, and in the north-east the Satpura range takes in the corner of the District formed by the Sálekasá and Darekasá zamíndáris. The main river is the Wainganga and practically all the others are its tributaries. The Wainganga enters Bhandara on the north-east, and flows diagonally across until it passes within a mile of Bhandara town on the south-west, its valley lying between the Ambagarh and Gaikhuri ranges. After this it flows to the south, forming for a short distance the boundary between Bhandara and Nagpur, and then turning south-east again cuts off the small and fertile strip of Pauni from the rest of the District. Its width in the District is generally 500 yards, but opposite Pauni it broadens to half a mile. During the open season it consists only of a small and sluggish stream everywhere fordable, and containing at intervals deep pools full of fine fish. The principal affluent of the Wainganga is the Bagh, which rises in the Chichgarh zamindári, south-east of the Partábgarh range, and flows almost due north for a course of 70 miles forming for some distance the boundary between Bhandara and Balaghat. It joins the Wainganga near Beni, being crossed by the new \*Såtpura railway just before its junction. Another fributary on the left bank is the Chulband, which rises in the Gnikhuri range and flows south, crossing the Great eastern road at Saongí, where it is spanned by a large bridge. The Pángoli rises near Tumsar, and joins the Bagh near Kamtlef on the border of the District. On the right bank the tributaries are the Chandan, which flows past Waraseoni and Rampaili

BHANDARA DISTRICT.

and meets the Waingangá near Saonrí, the Báwanthari flowing down from the Seoní District and joining it at Mowar, and the Súr coming east from Nagpur to a junction not far from Bhandára town. The valleys of the Waingangá and Bagh have been called the lake region of Nagpur, from the number of large artificial tanks which have been built for irrigation and form a distinctive feature of the country. The most important are those of Nawegaon, with an area of 5 square miles, and Seoní with a circumference of more than 7 miles, while smaller tanks are counted by thousands. These large tanks have been constructed by members of the Kohlí caste, and, though built without technical engineering knowledge, form an enduring monument to the natural ability and industry of these enterprising cultivators. The larger tanks are irregular lakes, their banks formed by rugged hills, covered with low forest that fringes the waters; while dykes connecting the projecting spars from the hills are thrown athwart the hollows. The Sakoli tahsil or southern portion of the District consists largely of hill and forest. Elsewhere the country is for the most part open and closely cultivated, and the expanses of rice and wheatfields thickly studded with fruit-bearing trees and broken by low flat-topped hills present a pleasant and prosperous appearance.

The main formation in the valley of the Waingangá Geology. consists of basalt and other igneous rocks, while in the castern and southern part of the District it changes to metamorphic sandstone. Beds of laterite are common in all parts. In the isolated ridges and hills round Bhandara a close-grained sandstone is found which makes a good building stone.

The forests generally cover and surround the hill ranges, Botany. but beyond the Partabgarh range a broad belt of jungle extends from Owara and Amgaou in the north, round the eastern and southern border of the District to the Chulband. Teak is found on the higher hills, and bamboos are abundant. The other leading timber trees are saj (Terminalia tomentosa), lendia (Lagerstramia parviflora) and bijasal or beula (Pterocarpus marsupium). Much of the zamíndári forest consists of salai (Boswellia serrata,) a tree of

BHANDARA DISTRICT. very little value. Mahná (Bassia latifolia) is abundant in the open country and the usual fruit-bearing and sacred trees surround the villages. The grasses called kusal and ghonár are principally used for thatching, and musyál for fodder. Káns (Saccharum spontaneum) sometimes invades the wheat fields.

Fanns.

Bison occur in the Gaikhuri and Partabgarh ranges and instances have been known of wild buffalo entering the District from the south. Tiger and panther are found in most of the forests. Snipe and duck are fairly plentiful, and large fish are obtained in the deeper reaches of the Waingangá and in Nawegaon tank.

Climate and temperature. The climate is slightly cooler than that of Nágpur, and the highest temperature in the hot weather months is usually not more than 112°. The nights, if the sky is clear, are nearly always cool. In winter the nights are cold, though it never netually freezes. Malarial fever is prevalent from August to the end of the year, especially in the south and east. Severe epidemics of cholera usually follow years of scanty rainfall.

Rainfall.

The average annual rainfall is 55 inches; the Tirora tahsil, situated in the open country to the north, gets a smaller rainfall than Bhandara and suffers most in years of drought.

History

Nothing is known of the early history of the District except for a vague tradition that at one period it was held by Gaoli kings. In the seventeenth century the open country in the north was included in the territories of the Deogarh Gond dynasty, and the fort at Ambagarh seems to have been built by the Pathán governor who hold the Dongartál estate in Sconi under the Gond Raja Bakht Buland. The eastern and southern portions of the District were at this time covered with continuous forest, but the fact that some of the zamindárs formerly held deeds granted by the Garhá-Mandlá dynasty shows that these territories were nominally under their jurisdiction, while the present ramindar of Chichgarh holds a patent from the Chanda kings. In 1743 Bhandara. with the rest of the Deogarh territories, became part of the Nágpur Maráthá kingdom, but was at first governéd by kamaishdárs or subordinate revenue officials who were controlled

Were BEANDARA The DISTRICT.

from Nagpur, and whose charges, ten in number, assigned as apparages to different officers of the court. present town of Bhandara was constituted the District headquarters in 1820, when a European officer was appointed as Superintendent under the temporary administration by Sir Richard Jenkins. Soon after the Maratha accession, a Kunbi pátel, who had rendered some services to Chimnáji Bhonsla on his expedition to Cuttnek, received as a reward a grant of authority over the eastern part of the District with instructions to clear the forest and bring it under cultivation. This grant led to the rise of the zamindari family of Kámtha, which by 1818 had extended their jurisdiction over a thousand square miles of territory comprising about fourteen of what are now the zamindari estates of Bhandára and Bálághát, the ancestors of the present zamíndars having held their estates in subordination to the Kamtha In 1818 Chimná Pátel, then zamíndár, rosc in support of Appa Sáhib, took the Maráthá governor of Lánji prisoner, and garrisoned a number of the existing forts with his retainers. A small expedition was despatched against him from Nagpur under Captain Gordon, which, after a successful engagement with four hundred of the zamindar's levies at the village of Nowargaon, stormed Kamtha and took Chimuá Pátel prisoner. The Kamtha territories were made over to the Lodhi zamindár of Warad, who had afforded assistance to the British and whose descendants still hold the zamíndári. Somo years afterwards the zamíndári of Kirdápur, now in Bálághát, was conferred on the deposed Kámtha family. The subsequent, history of Bhandara has been the same as that of the Nagpur kingdom, and on the death of Raghují III, the last Rájá, in 1853, it became British territory. During the Mutiny the peace of the District was undisturbed. In 1867 the Lanji tract and several of the zamindáris were taken from Bhandára to form part of the now Bálághát District.

An old cromlech and stone pillars are situated at Archeology. Tillotá Khairí, and some remains of massive stone buildings at Padmápur near Amgaon. Old temples, most of them of the kind called \*\*Remádpantí\*, built without mortar, 3re

BHANDARA DISTRICT. to be found at Adyál, Chakahetí, Korambí, and Pinglai, a suburb of Bhandára. There are a number of forts, the principal being those of Ambágarh constructed by the Muhammadan governor of Seoní; Chandpur and Bhandára traditionally ascribed to the Gaolís; Sangarhí and Partábgarh built by the Gonds; and Pauní constructed by the Maráthás. The fort of Ambágarh was used as a prison by the Maráthás, and it is said that criminals were sent there to be poisoned by being compelled to drink the dark and stagnant water of the inner well of the fort. This fort and also that of Pauní were held against the British in Appa Sáhib's rebellion of 1818 and were assaulted and carried by storm.

The people.

The population of the District at the last three enumerations was as follows: 1881, 683,779; 1891, 742,850; 1901, 663,062, Between 1881 and 1891 the increase was somewhat smaller than the Provincial average, partly owing to emigration to Nagpur and Berar. During the last decade, there was some emigration to Wardhaand Berar, and the District suffered from partial failures of crops in 1895 and 1896, being very severely affected by famine both in 1897 and 1900. The donsity of population per square mile is 167 persons. Under favourable circumstances the District could probably support with ease a density of more than two hundred. There are three towns, BHANDARA, PAUNI and Tomsan, and 1,635 Villages in Bhandara are generally of a comparatively large size, the proportion with a population of 500 or more persons being the highest in the Province. The principal statistics of population in 1901 are shown below :--

		Area	Number of		,	Popula-	Percent- age of variation	Number of persons
Tahefi.		in squate miles.	Towns,	Vil- lager.	Popula-	tion por equato mile.	in popul tion be- tween 1501 and 1001.	nble to read and
							1	
Bhandára		1,089	3	507	201,153	167	-11.0	6,251
Tirorá	<b>.</b> 1	1,829		571	291,614	220	-12.0	0,258

District Total		3,985	3	1,615	003,003	107	-10.7	. 16,746
		İ	l	1 ' 1	1		1	]

The statistics of language show that 774 per cent, of the BRANDARA population speak Marathi, and 134 per cent. Hindi and District. Urdú; of the remainder 56,000 persons, or 79 per cent. of the total number of Gonds, speak Gondi. About 88 per cent of the population are Hindus, and 10 per cent. Animists. Muhammadans number nearly 13,000, of whom 3,000 live in towns. Until recently there were a conside able number of Muhammadan cotton cleaners, but with the introduction of mill-spun thread this industry has declined.

The principal castes of proprietors are Maratha Brahmans Their castes (6,000), who possess 340 out of 1,917 revenue villages. Pon-tions. wars (63,000) with nearly 300, Kunbis (79,000) with about 200, Lodhis (18,000) with 166, and Kohlis (11,000) with 136. The Maratha Brahmans obtained their villages under the Bhonsla dynasty, when they were employed as revenue officials, and either assumed the management of villages or made them over to their relations. The three great cultivating castes are Ponwars, Kunbis and Kohlis, the Ponwars being traditionally skilful in growing rice, Kunbis with spring crops and Kohlis with sugarcane. The skill of the Ponwars at irrigation is proverbial, and it is said of them that they can cause water to flow up a hill. The Kunbis are dull and heavy, with no thought beyond their wheat and bullocks. The Kohlis live chiefly in the Chandpur tract of Bhandara and the Sakoli tabeils. They are not so prosperous as they formerly were, when Kohli Pátels built the great tanks already mentioned. Lodhis (18,000) are not important numerically, but they hold some fine estates, notably the zamindari of Kamtha with an income of over a lakh of rupecs. Gonds number 70,000 or about 101 per cent. of the population, and Halbas 17,000 Several of the zamindurs belong to each of these castes, the Gonds being generally seriously involved, and the Halbas comewhat less so, though they are not usually prosperous. The Gonds suffered severely in the famines. The menial weaving and labouring easte of Mehras is represented by 118,000 persons, or nearly 18 per cent, of the population, About 72 per cent. of the whole population are shown as dependent ou agriculture.

Buandara District. Christian Missions. Christians number 319 including 286 natives, of whom the majority belong to the United Free Church of Scotland Mission, which has been established in Bhandara since 1832, and maintains a hospital, an orphanage, and schools for boys and girls. A branch of the American Pentecostal Baptist Mission has recently been opened in Gondia.

General agricultural conditions. About 53 per cent. of the soil of the District is that called morand or black and nearly black soil mixed with limestone pebbles or sand. The best black soil or kanhar occupies  $4\frac{1}{V}$  per cent. and is alluvial, being found in the tracts bordering on the Wainganga, especially round Pauni, where the Wainganga takes a sudden turn, and the deposit of detritus has increased. Further east, yellow sandy soil, which gives a large return to irrigation, generally predominates and covers 31 per cent. of the whole cultivated area. The quantity of inferior land is therefore comparatively small.

Chief agricultural statistics and crops. Of the total area, 1,470 square miles or 37 per cent. are comprised in the 28 zamindári estates to which, however, it has been held that the custom of primogeniture does not apply, while 05 square miles are held wholly or partially free of revenue by members of the Bhonsla family, and 3,000 acres have been sold outright under the Wasto Land Rules. The balance is held on the ordinary tenures. The chief statistics of cultivation in 1903-04 were as follows, areas being in square miles:—

Tahsfi.		Total.	Cullivate	! !rrigated.	Cultur- ablo waste.	Porests.
Dhandára .	.,.	1,088	453	35	298	201
Tiroré	•••	1,328	657	40	475	83
Sákoří.	***	1,540	356	53	749	210
Т	otal	3,965	1,496	128	1,522	532

A large quantity of waste land still therefore remains, and as very little inferior soil has been brought under the plough, it would appear that there must be considerable scope for extension of cultivation. Rice occupies 628 square miles, joudr 158, wheat 135, gram 70, linseed 116 and pulses 254.

In recent years wheat has to some extent been supplanted by BRANDARA jowar, and while the area under rice has considerably fallen off, this has only to a small extent been counterbalanced by an increase in kodon. About four-fifths of all the rice grown is transplanted and the balance is broadcast. Wheat is grown principally in the Pauni, Tumsar and Rampaili tracts and small embankments are often constructed for wheat fields, especially when rice is grown as a rotation crop with wheat. Joyar is frequently sown as a spring crop in Bhandara, as the rains are frequently too heavy to allow it to succeed as an autumn crop. Linsced, gram and the pulse tiura (Lathyrus satirus) are grown as second crops in rice fields. Sugarcane was formerly an important crop in Bhaudara, but the area under it has decreased in recent years, and is now only about 1,500 acres or less than a third of the former total. Ginger, oranges and plantains are grown in the villages of Jam and Andhargaon and sent to Nagpur.

The practice of growing second crops in rice fields and of Improvements irrigating rice has grown up since 1864. In a favourable ral mactice. year second crops are grown on as large an area as 341 square miles. An inferior variety of sugarcane called kathai which gives only half the usual outturn of sugar, but is easier to cultivate and less liable to damage by wild animals, has been generally adopted in preference to the superior canes. In the decade ending 1904 more than 14 lakhs were advanced under the Land Improvement Loans Act, principally for the construction of irrigation tanks, and nearly 6 lakhs under the Agriculturists' Loans Act, of which S lakhs were given out during the scarcity of 1902-03. A considerable proportion of this latter sum was expended in agricultural improvements.

No good cattle are bred in the District except in the Cattle pooles, small forest tract to the north of the Ambagath range have and theep. there are professional breeders of the Golar caste. The herde from here are taken to Baihar for grazing during six months. of the year. Elsewhere no care is exercised in breeding, and the type-produced is poor. Bullocks are imported from the Kanker and Bastar States and from the Satpura Districts, Chinindwarn and Sconi, for rice cultivation, and from Berar in the spring crop area. Buffaloes are

BHANDARA DISTRICT. used for rice cultivation and also for draught. They are not largely bred locally, the young males being imported from the northern Districts. They are slightly more expensive than bullocks, and are usually kept in combination with them, and are used for the heavy work of transplantation and harvesting. There are very few sheep, but numbers of goats are bred by ordinary agriculturists both for food and for religious offerings.

Irrigation.

The District of Bhandara has a larger irrigated area than any other in the Province, as much as 370 square miles, receiving an artificial supply of water in a normal year. This represents nearly a quarter of the net area under crop, and nearly half of that under rice, which, with the exception of a few thousand acres of sugarcane and vegetables, is the only crop to which irrigation is applied. In 1903-04 the irrigated area was 127 square miles. The water for irrigation is accumulated in village tanks of the ordinary kind and either percolates through the embankment or is drawn off to the fields by channels constructed of earth, from outlets cut in the centre or side of the embankment. A few of the large reservoirs, such as Nawegaon, Seoní and Siregaon, have rough masonry sluices. A system is also practised of constructing small embankments to hold up water temporarily during the montoon months; in September and October those are cut, and the water taken on to the rice fields, while wheat is sown in the bed of the tank, Irrigation is at present almost entirely dependent on a sufficient supply of rain to fill the tanks at some period during the monsoon, and in 1899, when there was a complete failure of the rainfall, only about 4 per cent, of the normal cropped area could be supplied with water. The configuration of the country, and the hill ranges traversing the District, afford a primiter of invourable sites for large storage reservoirs similar to those already constructed by the people, and several projects of this nature have been prepared by the Irrigation department. The construction of the Khairbanda tank to protect 4,000 acres is nearly completed.

Forests.

Government forest covers 532 square miles, of which all but 8 are reserved forests. The chief areas are situated

on the Ambagarh, Gaikhuri and Partabgarh ranges, and there is a small block to the west of Pauni. The higher levels of the Gaikhuri and Partabgath hills contain a certain amount of teak. Elsewhere the ordinary mixed species are found. Bamboos are abundant. The bulk of the revenue comes from timber and bamboos, and the rest from the usual minor forest produce, The value of forest produce sold in 1903-01 was Rs. 45.000. Besides the Government reserves, the District contains 946 square miles of tree forest, principally in the zamindáris. Some teak-forest is found in Darekasá and Sálekasá.

BRANDARA DIBIRICT.

The manganese ores in the District are now being Mmerals. worked by a European firm, the principal deposits being near Tumsar. About 150 labourers are employed, and the output for 1904 was 8,558 tons. Deposits of aron ore of a superior quality exist in several villages in the Tirora tabeil, and are worked to a small extent by native artificers. A little gold is obtained by washing in the Sonihari Dudhi river.

The weaving of silk-bordered cloths is a substantial in- Arts and dustry in Bhandara, and has not yet been seriously affected by Manufactures. the competition of the mills. The principal centres are Bhandára, Pauní, Mohári and Andhárgaon, and the total number of persons employed is about 0,000. Fine cotton cloths are woven with coloured silk borders, usually red, and the weavers in Pauni use counts as fine as 80's. The silk thread\_comes from Assam through Nagpur ready dyed. Ordinary country cotton cloth is also produced in considerable quantities by Mehras, who live in large numbers in Tumsar and the surrounding villages. Cotton cloths are dyed with imported materials in a number of villages, about 500. persons being employed in this industry in Beni. In Bhandara all kinds of brass vessels are made. Stone jars are turned out in Kaneri and cart-wheels in Tumear. Soft grass matting bedding is manufactured from a grass called arkhwasa, and bamboo baskets and matting are made in a number of villages,

Commerce.

. Rice is the stople export, and is sent to Bombay for the foreign trade, and also to Nagpur and Borar. Wheat, gram, the pulse mad and oilseeds are also experied. these grains being generally taken by cart from Paunf to

BHANDARA DISTRICT.

Nágpur. Of the forest produce teak and beulá ( Pterocarpus marsupium), timber and bamboos, and mahuá, myrabolama. hides and wax are generally exported; and various articles of local manufacture, as brassware, silk-bordered cloths and stone jars, are sent to neighbouring Districts. In the last few years there have been considerable exports of manganese. Cotton piece-goods are imported from the Nagpur and Bombay mills, and English cloth both from Bombay and Calcutta Yarn is obtained from the Nagpur and Hinganghat mills. Kerosene oil is brought from Bombay and is now solely used for lighting. Sea salt is brought from Bombay. Mauritius sugar is principally used. Gur or uprefined sugar is both produced locally and imported from Bombay and the United Provinces. A certain amount of jowar and the pulse arhar is brought into the District for consumption from Berar and Nagpur. The principal trading stations are Gondia and Tumsar, and after them Tirorá and Amgaon. Tumsar is the centre for the part of the District north-west of the Wainganga, and for the adjoining tracts of Sconi and Bálághát. South of the Waingangá the trade of the Tirorá tabsíl on both sides of the railway goes to Tirora, Gondia and Amgaon according to their relative proximity.

Railways and Roads,

The Bengal-Nágpur line passes through the northern portion of the District, with a length of 78 miles and ten stations including Bhandára within its borders. The Sátpurá narrow-gauge extension starts north from Gondiá junction, and has a length of 11 miles and one station in the District. The most important roads are the eastern road running through the south of the District, and the roads from Tumsar to Rámpailí and Katangí, from Gondiá to Bálághát and from Tirorá to Khairlánji. The length of metalled roads is 136 miles and of unmetalled 259, all of which, except 21 miles of the latter class maintained by the District council, are in charge of the Public Works department, the expendition unkeep being Rs. 58,000. Avenues exist on 26

Famine.

The years 1822, 1832 and 1869 are membered as having been marked by famine from failure of rainfall. After 1869, the year of the Bundelkhand famine, the District prospered until the cycle of bad seasons common in 1894;

Two years of poor crops were followed by a harvest of less Buandara than half the normal in 1895-96, and of one-third of the DISTRICT. normal in 1896-97. Sovere distress occurred in the latter year, the numbers on relief rising to 43,000 persons or 6 per cent. of the population in June 1897, and the total expenditure being 10 lakhs. Again in 1899-1900 both the rice and wheat harvests were complete failures and famine ensued. 140,000 persons, or nearly 19 per cent, of the population were on relief in July 1900, and the total expenditure was 26 lakhs. In both these fumines besides improvements to communications large numbers of tanks were constructed and repaired. In 1902 there was again a very poor rice crop and some local relief was given, tank works also being undertaken by the Irrigation department.

The Deputy Commissioner usually has a staff of three District sub-Assistant or Extra-Assistant Commissioners. For administra- divisions and tive purposes the District is divided into three tahsils, each of which has a tabsildar and naib-tabsildar. The Forcet Officer is generally a member of the Provincial service. The Executive Engineer of the Bhandara Public Works division. comprising Bhandara and Balaghat Districts, is stationed at Bhandara.

The civil judicial staff consists of a District and a Sub-Civil and ordinate Judge, and a Munsiff at each tabsil. The Divisional Justice. and Sessions Judge of the Nagpur Division has jurisdiction in Bhandara. There are benches of honorary magistrates at Bhandara, Rampailí, and Amgaon. Suits brought for the use of water for irrigation are a noticeable feature of the civil litigation. Heinous crimes are somewhat numerous in Bhandara; murders committed with an axe being a comparatively common offence. Cattle thefts are also frequent,

Owing to large changes in the area of the District, the Land Revenue old figures of the revenue demand cannot usefully be tion. en compared with the present ones. Under Maratha administrashort-term settlements were the rule. The farm of a ces vas given to an official called a mamlatdar. generative favourito, who made himself responsible for the revenile. Each village had a patel or headman who hacted as its representative and engaged for the revenue

BHANDARA DISTRICT. demand which rose and fell according to the circumstances of The demand was distributed over the fields of . the village, each of which had a number representing its proportionate value. The patel had no proprietary right. but his office was generally hereditary, descending not necessarily to the eldest son, but to the most capable member of the family. The tenants also had no legal status but were seldom ejected so long as they paid their rents, more especially as the supply of land was in excess of the number of cultivators available to till it. The result of the system was. however, that the mimialdiers, who were usually Maratha Brahmans, managed to get a large number of villages into their own hands and those of their relations, and when proprietary rights were conferred by the British Government they thus became hereditary laudowners. After the acquisition of the District in 1853, short-term settlements were continued for a Preparations for the first regular survey were commenced in 1858, and a thirty years seitlement completed in 1867, the demand then fixed being 4.57 lakks in the area now constituting the District. During the currency of this settlement the District prospered, the price of agricultural produce rose greatly on the construction of the railway, and cultivation expanded. District was re-settled in the years 1894-90, and the revenue raised to 6.01 laklis, which was equivalent to an increase of 38 per cent, in the khallsa and 69 per cent, in the zamindári estates. The average revenue incidence per cultivated acre was R. 0-10-11 (maximum R. 1-3-1, minimum R 0-5-4), while the corresponding rental incidence was R. 0-15-4 (maximum R. 1-3-9, minimum R. 0-5-5). The collections of revenue have varied as shown below, in thousands of rupecs :-

•

<sup>&</sup>lt;sup>3</sup> In the year 1900-01 the land revenue collections were short owing to famine.

The management of local affairs, outside municipal areas, Bhandara is entrusted to a District council and three local boards, Local Boards each having jurisdiction over one tahsíl. The income of the and Munici-District council for 1903-04 was Rs. 61,000, while the expenditure on education was Rs. 24,000 and on civil works Rs. 17,000. BHANDARA, TUMSAR and PAUNI are municipal towns.

and

The force under the District Superintendent of Police Police consists of 352 officers and men including 3 mounted con-Jails. stables, besides 2,116 village watchmen for 1,638 inhabited villages. Bhandara has a District jail with accommodation for 126 prisoners including 11 females. The daily average number of prisoners in 1904 was 70.

In respect of education Bhandara is neither particularly Education. advanced nor backward, 2.5 per cent. of the population (5.2 males and 'I females) being able to read and write. Statistics of the number of pupils under instruction are as follows: -1880-81, 3,899; 1690-91, 7,630; 1900-01, 7,682; 1903-04, 8,226, including 275 girls. The schools comprise 2 English middle schools at Bhandara, with 5 vernacular middle schools and 129 primary schools, besides 2 private schools One of the Bhandara English schools is managed by the Free Church Mission. Two high school classes have been opened at the expense of a private resident in the new English school, but have not yet been recognised by the University. There are 6 girls' schools, 3 in Bhandara and one each at Pauni, Sanichari and Tumsar. A separate school for low-caste Dher boys is maintained at Paunt The expenditure on education in 1903-04 was Rs. 46,000. the income from fees being Rs. 4,500.

The District has eight dispensaries, with accommodation Hospitals and for 59 in patients. During 1904, 93,106 cases, of which 325 Dispensaries. were those of in-patients, were treated in these institutions and 2,111 operations were performed. The expenditure was Rs. 12,000, of which the greater part was provided from Provincial and local funds.

Vaccination is compulsory in the municipal towns of Vaccination. Bhandara, Tumsar and Pauni. The percentage of successful vaccinations in 1903-04 was 45 per 1,000 of the population. or higher than the Provincial average,

BHANDARA DISTRICT.

BHANDARA TAMBIL (A. B. Napier, Scillement Report, 1902. A District Gazetteer is being prepared.)

Bhandara Tahsil.—The western tahsil of the Bhandara District of the Central Provinces, lying between 20° 40' and 21° 43' N. and 79° 27' and 79° 55' E., with an area of . 1.088 square miles. The population in 1901 was 204.153. and in 1891 was 229,287. The density of population is 187 persons per square mile. The tabsil contains three towns. BHANDARA, the tabsil and District headquarters, population 14,023, PAUNI (9,366) and TUMSAR (8,116), and 507 inhabited villages. Excluding 204 square miles of Government forest, 63 per cent, of the available area is occupied for cultivation. The land revenue demand in 1903-04 was Re. 2,09,000 and that for cesses Rs. 20,000. The tabeil occupies a narrow strip of land along the west of the District, consisting mainly of open level country bordering the Wainganga, a considerable area being covered with fertile black soil. The cultivated men in 1903-04 was 483 square miles, of which 35 square miles were irrigated.

TIROBA.

Tirora .- The northern tabeil of the Bhandara District, Central Provinces, lying between 21° 10' and 21° 47' N. and 79° 43' and 80° 40' E., with an area of 1,328 square miles. The population in 1901 was 201,514, and in 1891 was 334,579. density of population is 220 persons per square mile. The tabsil contains 571 inhabited villages. Tirorá, the tabsil headquarters, is a village of 3,640 persons, 30 miles distant from Bhandara, on the Bengal-Nagpur Railway. Excluding 88 square miles of Government forest, 56 per cent. of the available area is occupied for cultivation. The land revenue demand in 1903-04 was Rs. 1,46,000 and that for cesses Rs. 22,000. The tabsil includes 11 zamindári estates covering an area of 769 square miles, of which 163 are under forest. It consists roughly of an open level tract of ricegrowing land with forests towards the eastern border. cultivated area in 1903-04, was 657 square miles, of which 40 square miles were irrigated.

SAKOLI.

Sakoli —The southern tabail of the Bhandera District, Central Provinces, situated between 20° 41' and 21° 17' N. and 79° 43' and 80° 34' E., with an area of 1,549 square

miles. The population in 1901 was 167,395, and in 1891 Saxout. was 178,984. The density of population per square mile is 108. The tabsil contains 557 inhabited villages. Its headquarters are situated at Sákoli, a village of 2,019 persons, distant 24 miles from Bhandara by read. Excluding 240 square miles of Government forest, 32 per cent. only of the available area is occupied for cultivation. The land revenue demand in 1903-04 was Rs. 1,25,000 and that for cosses Rs. 12,000. The tabeil includes 17 zamindati estates with a total area of 710 square miles, of which 100 consist of forest. It is a rice-growing tract broken up by small ranges of hills, and contains the large irrigation tanks for which Bhandara is noted. The cultivated area in 1903-04 was 356 square miles, of which 53 square miles were irrigated.

Bhandara Town.—The headquarters town of the Bhan-Bhancara dara tabsil and District, Central Provinces, situated in 21° 10' N. and 79° 40' E., on the Wainganga river, 7 miles from a station on the Bengal-Nagpur Railway. Population (1901) 14,023. The town contains an old fort said to have been built by the Gaolis, which is now used as a jail. constituted a municipality in 1867, and the average municipal receipts for the decade coding 1901 were Rs. 15,000. 1903-04 the income had more than doubled and amounted to Rs. 35,000, the chief sources being octroi and water-rate. The water-supply is obtained from the Waingangs. Three filtration wells have been constructed in the hed of the river and water is raised from them to a service reservoir near the jail. The works were opened in 1900, the cost of the teheme being 1.84 lakharaid the annual maintenance charges about Rs. 6,000 The principal industry of the town is brare-working, and its name is said to be derived from Ohdna, a brass dish. Cotton cloth is also woven, but the trade of the place is not considerable. The educational institutions comprise a private high reheal supported by contributions from the residents, an Euglish middle and preveral other boys' and girls' reliable. Three diagensaries are maintained, including mission and police hospitals. The United Free Church of Scotland establishtel a mission station here in 1868, and now supports an orphanage, dispensiry and several relicols.

GONDIA.

Gondia. - A village in the Tirorá tabsíl, Bhandára Distriet, Central Provinces, situated in 21° 28' N. and 80° 13' E. on the Bengal-Nagpur Railway, 81 miles from Nagpur and 601 from Bembay. Gondiá is the junction for the new Sátpurá parrow-gauge railway which runs to Jubbulpore across the Sátpurá plateau. Population (1901) 4,457. It is one of the two leading goods stations in the Bhandara District, receiving the produce of the surrounding area of Bhandára and of the lowlands of the adjoining Bálághát District. A large weekly grain-market is held here. The greater part of the town stands on Government land, and the ground rents realised are credited to a fund for sanitary purposes, which is supplemented by a house-rate. A branch station of the American Pentecostal Mission of Raj-Nandgaon has recently Gondiá contains Hindí and Maráthí been established. primary schools, and a dispensary.

PAUNI.

Panni.-A town in the Bhandara tahsil and District of the Central Provinces, situated in 20° 48' N. and 79° 30' E., on the Wainganga river, 32 miles south of Bhaudara by road. Population (1901) 9,366. Some bathing ghats or flights of stone steps have been constructed on the bank of the Wainganga, and the town contains a fort which was stormed by the British in 1818. Pauni was constituted a municipality in 1867, and the average municipal receipts for the decade ending 1901 were Rs. 4,200. In 1903-04 the income was Rs. 4,500, being mainly derived from a house-tax. The staple industry of the town is the manufacture of silk-bordered cloths, and thread of very fine counts is woven. The weavers are. however, not very prosperous. The town stands in the fertile black soil tract called the Pauni Haveli. It contains vernacular middle and girls' schools, a school for low-caste Dher boys and an Urdú school, and also a dispensary.

TUMBAR,

Tumsar.—A town in the Bhandara tahefl and District, Central Provinces, situated in 21° 23′ N. and 70° 46′ E., on the Bengal-Nágpur Railway, 27 miles from Bhandara and 570 from Bombay. Population (1901) 8,116. The town was constituted a municipality in 1867, and the average municipal receipts for the decade ending 1901 were Rs. 5,400. In 1908-04 the income was Rs. 4,000 and was principally derived

from a house-tax and market-dues. Tumsar is an important Trusar. commercial town receiving the produce of the north of the District and the adjoining tracts of Seoni and Balaghat. A covered 'market place has been constructed and a large weekly grain market is held here. .The rice grown in the vicinity of Tumsar has a special reputation for excellence. The local handicrafts include cotton-weaving, which is carried on in the town and several adjoining villages, the annual purchases of thread by the weavers being estimated at 3 lakhs. White loin-cloths with red borders are the chief articles woven. Numbers of cart-wheels are also made in Tumsar and exported to Nágpur and Berár. The town possesses a vernacular middle school and a girls' school and a dispensary.

Balaghat District .-- A District of the Central Pro-BALAGHAT vinces, situated between 21° 19' and 22° 21' N. and 79° 39' DISTRICT. and 81° S' E., with an area of 3,132 square miles. It is configuration, bounded on the north by the Mandla District; on the east by and hill and the Biláspur and Drug Districts and the Kawardhá and Khairágarh States; on the south by Bhandara; and on the west by Seoni. The District consists of an upland section of the most easterly portion of the Satpura plateau, and of a strip of low country forming part of the walley of the Wainganga, and extending along the southern and western border of the hills. The eastern ridge of the Satouras. known as the Maikala range, divides it from the Chhattisgarh plain. The hills and elevated plateaux, which occupy about two-thirds of the District, extend in the north almost across its entire width, with the exception of a small lowland strip to the north-west consisting of the valley of the Wainganga, here only about 10 miles wide, and forming the Mau estate. The greater part of the hilly country is included in the Baihar tahsil, and outside the Feudatory States, is perhaps the wildest and most backward area in the Province. It consists mainly of the three tablelands of Paraswara, Baihar and Raigarh from west to east. The Raigarh platean, which is about 2,000 feet high, is a small open stretch of undulating country covered with high grass, and surrounded by thickly wooded hills, the highest peaks of which rise to 2,900 feet. It is drained by the Halon and Kashmiri rivers, and is

BALLGUAT DISTRICT. approached from Baihar by the passes of Bhainsaghat and Lapti running through dense forest. The main tableland of Baihar to the west of Raigarh and about 200 feet below it, is also very undulating and covered with thick forest, the soil being generally sandy, and cultivation consisting principally of the minor autumn millets, as the slopes are frequently too steep to permit of the growth of rice. The valley is watered by the Banjar and its tributary the Tannor, which passes Baihar. Further west and separated from the Banjar valley by a long ridge lies the Paraswara plateau slightly lower than that of Baihar, and somewhat more fertile. It is watered by the Kanhar, a tributary of the Banjar, and on the west is bounded by another range of hills leading down to the Wainganga valley. The drainage of this part of the District is north to the Narbadá. South of the main plateau the hilly country consists of small and scattered tablelands, with a southerly inclination and gradually narrowing in from the west. The hills are for the most part covered with forests belonging to zamindari estates. Along the base of the outer spurs of hills lies the plain country of the District forming part of the valley of the Waingangs. narrow and closely shut in by hills to the north, and gradually opening out on both sides of the river to the south-east and south-west. The general elevation of this part of the District is about 1,000 feet above sca-level. It is watered by the Wainganga and several minor streams, the principal of which are the Bagh, Ghisri, Dee and Son. The Wainganga flows nearly due south through Balaghat, its width varying from 200 yards in the upper reaches to 400 lower down. Its bed is generally rocky. The Bagh rises in the Chichgarh hills of Bhandara and flows north and north-west, forming for a short distance the boundary between Bálághát and Bhandara. It is crossed by the Satpura railway just before its junction with the Wainganga on the border of the District. The Chisri, Deo and Son rise in the pastern range of hills, and join the Bagh after a short and rapid course. On the west of the Wainganga the low country, broken in places by is inted hills, lies along the eastern and southern border of the portion of the Satpura range belonging to the Sconi District, a triangular strip of which abuts into Balaghat. The Sarathi BALAGHAT The lowis the only stream of any consequence on this side. land country is well watered and studded with fruit trees, and is principally devoted to the growth of rice.

Gneissic and metamorphic rocks are the main formations, Geology. and there are a few outliers of Deccan trap in the north. gneissic rocks belong partly to a highly metamorphosed sedimentary and volcanic series resembling the Dhárwár schists of southern India and known locally as the Chilpi beds. The metamorphic or transition rocks consist of quartzites, shales and limestones.

The extensive forests of the District are mainly of the Botany. mixed character usual in Central India. Along the Waingaugá river are scattered patches of teak (Tectona grandis), and towards the north-east sail (Shorea robusta) is the dominant tree. In various parts of the District fine clamps of bamboos occur. Besides sál, which is plentiful, and teak, which is always scarce or local, the principal trees to be met with are saj (Terminalia tomentosa), beuld (Pterocarpus marsupium), shisham (Dalbergia sissoo), dhaura (Anogeissus latifolia), palás (Butea frondosa), aonlá (Phyllanthus emblica), haldu (Adina cordifolia), lendiá (Lagerstræmia parviflora), moyen (Odina Wodier), with species of Diospyros, Schleichera, Schrebera, Soymida, Boswellia, Bombax, Garuga, Buchanania, and Stereospermum. Shrubs and small trees include Grewia, Zizyphus, Nyctanthes, Flueggia, Cleistanthus, Woodfordia and Casearia.

The usual kinds of game, including tiger, leopard and deer, Fauna. Bison are found in the Sonawani forests. are fairly plentiful. in Bíjágarh, and in the north of the plateau. illigai roam on the Raigarh plateau and swamp deer are met There are a few herds of black with in the Topla reserve. buck on the Baihar plateau. In the Hirri forests are some wild cattle, descended from tame ones let loose, which do serious damage to the crops but are not killed. Wild duck are , fairly plentiful in the tanks in the open country but snipe are less frequent.

The uplands of Baihar are subject to sharp frosts in Climate. December and January, which cause much injury to the

BALAGHAT DISTRICT. foliage of trees and the cold weather crops. The climate of Bálághát is that of the Nágpur plain, but it is especially dampin the monsoon season. As usual in rice country, malaria is prevalent in the autumn months. The Baihar talisil, owing to its heavy rainfall and dense forest, is notoriously unhealthy from August to December, and the mortality from malaria has largely contributed to retard immigration. The particles of mica suspended in the water also tend to produce gastritis.

Rainfall.

The average annual rainfall at Bálághát is 62 inches, and exceeds that of any other District in the Province. The District owes its copious rainfall to the fact that it is encircled by hills on the north and east, on which the rain clouds brought up by the south-west monsoon impinge. Until within the last few years the rainfall has seldom been deficient.

History.

Bálághát, as it now stands, has only recently been constituted. The Baihar tahsil formerly belonged to the Mandla District, and formed part of the dominions of the Gond dynasty of Garhá Mandlá. The eastern part of it was for some time assigned to the chief of Kawardhá as a reward for service. Soon after the beginning of the 19th century the greater part of the tabeil was laid waste by an inroad of the Gond Rani of Ramgarh in Mandla. and at the time of the cession in 1818 the country was sparsely populated. Of the low country, the old parganas of Hattá, Dhansuá and Lánji wore included in the Mandlá territories, while the tract on the west of the Wainganga belonged to the Deogarh kingdom, which was annexed by the Bhonsla rulers of Nagpur in 1743. In 1798 the Bhonslas also obtained the Mandla territories, and the bulk of what is now the Bálághát tahsíl was then administered from Bhandara. At this period the greater part of it was covered with forest, and several of the present zamindári estates originated in grants of territory made by the Maráthas for the purpose of opening up the country. In 1862, when the Baihar tabsil, then attached to Mandla, was being settled, the attention of Government was directed to its

natural resources, and it was recommended that special mea- Balaguar sures should be taken to colonise it. With this object sanction was obtained in 1867 to the formation of a new District, consisting of the Baibar tabell and a fringe of open country below the hills, which was taken from the Bhandara and Sconi Districts, and from which was to be obtained a supply of colonists for the upland plateaux. The task of reclaiming from waste the remote and hitherto almost unknown plateau of Baihar was entrusted to Colonel Bloomfield, for many years Deputy Commissioner of the Balaghat District, and under his management some progress was made towards settling the large expanse of fertile waste land with sturdy Ponwar peasantry. But owing principally to the unhealthiness of the climate, and partly also to changes in Government policy, and the neglect of local officials, no very great or permanent advance has been made; and the tract remains one of the poorest in the Province. Very recently (1904) fresh measures have been taken for the systematic encouragement of immigration. A scheme for liberal advances for the reclamation of land has been sanctioned, the construction of a number of tanks undertaken, and other unduccments offered to immigrants of the good agricultural castes.

. The archeological remains are not of much importance. Archeology. Baihar contains a bumber of stone tanks and ruined temples, some built in the Hemádpanti style without coment. The fort of Lanji was built by the Gonds early in the eightcenth century, and was afterwards the headquarters of a kamaishddr under the Marathas. Human enerifices are said to have been formerly offered at the temple of the Lanjki Devi, the tutelary deity of the place. About a mile from the town, in the bamboo forest, stands the temple of Koteshwar, at which a small annual fair is held. At Man in the middle of a tank, about a mile from the village, a granite platform has been constructed on which is the image of a Nága and a pillar. Other remains are at Bísápur near . Katingi, . Sonkhar Bhimlat, and Sawarjhiri Bhíri.

BALAGHAT DISTRICT. The people. The population of the District at the last three enumerations was as follows: 1891, 340,614; 1891, 383,363; 1901, 326,521. Up to 1891 the District prospered and the rate of increase was about equal to the Provincial average. During the last decade the decrease of population has been nearly 57,000 persons, or about 15 per cent. The District was very severely, affected by famine both in 1896 and 1897, and the Bálághát tahsíl also in 1900, and the decrease of population is mainly to be attributed to this cause. About 11,000 persons emigrated to Assam during the last decade. The District contains one town Balagnar and 1,075 inhabited villages. The principal statistics of population based on the census of 1901 are shown below:—

Taheil.	Arct in square miles.	Numl		Popula- tion.	tion per	Percent- are of paristion in popula- tion be- tween 1891 and 1901.	able to read and
Bálághát Bailiar District Total	 1,999 1,741 3,132	1	552 403 1,073	230,141 80,230 825,371	172	-17°6 - 61 -14°0	5,613 1,453 7,029

In 1904, 11 villages containing 1,150 persons were transferred from Bálághát to Mandlá, while a tract of reserved forest was received from that District. The revised totals of area and population are given above. About 75 per cent. of the population are Hindus, 22 per cent. Animists, and 6,454 persons are Muhammadans. The eastern portions of the District have been largely populated by immigration from Chhattisgarh, as is shown by the fact that nearly 145,000 persons, or 41 per cent. of the total, speak the Chhattisgarhi dialect. Of the balance the language of 84,342 persons is shown as Maráthí and that of 54,168 persons as Gondí. The Ponwárs, numbering 41,106, have a special dialect, a mixture of Hindí and Maráthí, and the Marárs another of somewhat the same nature.

Their castes and occupa-

The principal landowning castes are Ponwars, Gonds and Lodhis. Ponwars (41,000) are the best cultivators and are especially skilful at the irrigation of rice. Many Ponwars also are lessees of villages in the zamindari estates and headmen of

ryotwari villages in the Baihar tahsil. The Lodhis (18,000) BALAGHAT are partly immigrants from Chhattisgarh, and partly from northern India. Gonds (73,000) constitute 32 per cent. of the population, and Baigás and Binjháls (6,000) 2 per cent. The Gonds are found both in the Balaghat and Baihar tahsils, and those of the open country are gradually adopting settled methods of cultivation in imitation of the Hindu tenants. Those of the Baihar tabsil are still backward and migratory. The Pardhans are the priests of the Gond and take the clothes and jewels of the dead, and the Ojhas are bird-catchers and tattooers. The Gonds are polygamous in Balaghat, and the number of a man's wives gives an indication of his wealth and dignity, as many as six being by no means extraordinary. On market days a Gond goes to the bazar with all his wives walking behind him to show his importance. The Baigás are also priests of the 'Gonds and are employed to lay the ghosts of persons who have been killed by tigers. They are one of the wildest of the tribes and are incapable of sustained manual labour, though they are clever at transplanting . rice-plants. This is the only field-work which they usually do They collect forest produce and exchange it for for hire. small quantities of grain, and will subsist for weeks together on roots and fruits, in the collection of which they display the greatest skill. Since the system of bewar or patch cultivation has been stopped in Government forest, the Baigas are bard put to it to make a living. An attempt was made to teach them to adopt regular cultivation by settling them in five villages under the direct supervision of the revenue officials of Baihar, but it has been given up as a failure. Some idea of the difficulty to be encountered may be gained from the fact that Baigh tenants if left unwatched would dig up the grain which they had themselves sown and eat it. They are skilled woodmen and some are employed as They also catch fish and make hamboo forest guards. matting to a small extent. Both Gonds and Baigás suffered severely in the famines. Farm-servants are recruited from all castes, but are principally Gówáras. In the Baihar tabsíl are a number of Golars (1,200) and Banjárás (1,000) who are professional cattle graziers. About 72 per cent. of the

BALAGHAT DISTRICT.

population of the District were shown as dependent on agriculture in 1901.

Christian Missions.

Christians number 219, including 191 natives, most of whom belong to the Balaghat Mission. This institution is unsectarian, and its efforts are principally directed to the conversion of the Gonds and Baigas. It was founded by the Reverend J. Lampard, who still directs it, and it has four stations at Bálághát, Baihar, Nikum and Khursípár, with schools at each station, an orphanage and an industrial farm.

General agricultural conditions

The quality of the soil in the plains is as a rule much superior to that of the plateau. It is of greater depth and more fertile, while in Baihar the mixture of particles of mica with the soil also reduces it's productive capacity. The allnvial land on the banks of the Son and other rivers in the eastern parts of the lowlands is the most fertile of all, but its area is insignificant. Next to this the richest and deepest soil is found in the strip about ten miles wide extending along the left bank of the Wainganga from the Dhansua hills to its junction with the Bagh. The plains of Dhansua and Hattá parganas are rich in black and brown soil of suverior quality and good depth; and there is also good brown soil in the north Karolá tract to the west of the Wainganga, and in Bhadra zamindari to the extreme south-east. In the hilly country and the Mau valley the soil is generally medium or poor, dark soil being only found in patches in the Man valley and in the shallow depressions, which form a characteristic feature of the plateaux. The Raigarh plateau is the most fertile portion of the Baihar tahsil, but the tract is very thinly populated, and much of the land The good quality of the soil, however, unreclaimed. renders this area rich in pasturage. In the hill villages of the zamindaris the land is, as a rule, very poor, being largely intermixed with stones and gravel or coarse sand.

Chief agriculties and crops.

Of the total area 928 square miles or 29 per cent. are tural statis-included in the 12 zamindari estates. There are about 230 ryotware villages with an area of 370 square miles, of which 90 are cultivated and pay a revenue of Rs. 20,000, while 4,000 acres have been sold outright under the Waste

Land Rules. The remaining area is held on the ordinary BALAGUAY The following table gives the leading statistics DISTRICT. of cultivation in 1909-04, with areas in square miles :--

	Talisti.		Total.	Culti-	Irrigated	Cultur- able waste.	Forests.
Bálágbát		•••	1,888	561	24	429	308
Baihar		•••	1,744	220	27	467	661
	Total		3,132	751	51	896	972

Not much of the fertile land in the low country remains unoconpied, but elsewhere there is considerable scope for extension of cultivation. Rice occupies 366 square miles, kodon and kutki 187 square miles, wheat 28, arad 75, linseed 57, gram 34, and tiurá 36. Rice is by far the most important erop of the District, and in sowing it the system of transplantation is usually practised. Kodon, the staple food of the Gonds, is grown chiefly in the hilly tracts, and in the plateaux of Baihar and Raigarh. Tobacco is cultivated in the alluvial soil of the Son valley, and is a very profitable erop. It covers rather less than 1,000 acres. Castor is sowr in rotation with tobacco. Sugarcane was grown on 1,300 acres in 1903-04.

Between 1867 and 1895 the area taken up for cultivation Improvements increased by 31 per cent., and that actually exopped by 19 practice. per cent. The area on which two crops were grown in the year and the number of tanks constructed for irrigation largely increased during the same period. The famines of 1897 and 1900, however, caused a decline in the cropped area which had not been recovered by 1903-04. Manure is now more largely applied to the rice crop, and cattle and smull stock are sometimes pouned at night in the fields during the summer months. In the decade ending 1903-04, Re. 72,000 were advanced by Government under the Land Improvement Loans Act, and nearly 7 lakhs under the Agriculturiets. Loans Act.

Cattle are bred principally in the Bailiar talisil, where Cattle, ponies there are excellent grazing grounds. The ordinary cattle are, and theep,

BALAGHAT DISTRICT. small and not particularly strong. The best bullocks are bred by Golars and are sold as yearlings at fairly good prices. Bulls are always reserved for breeding by the owners of any considerable number of cows. Buffaloes are used for the heavy work of hauling the rice plants from the nurseries at the time of transplantation. They are not bred to any considerable extent in Bálághát, but young males are imported from the northern Districts. The grazing grounds are generally adequate, and those of the Baihar tahsil are resorted to by large herds of cattle from the surrounding Districts during the hot There are no members of the professional weather months shepherd easte, but goats are bred by ordinary landholders for food and to be used as religious offerings. Pigs are reared for the same purposes in the Baihar tahsil. Very few sheep are kept. The principal cattle markets are at Warasconi and Lálburrá in the plain country and at Bhíri on the plateau.

·Irrigation.

About 150 square miles can ordinarily be irrigated, but in 1903-01 the area was only 27 square miles owing to the unfavourable rainfall. With the exception of about 7 square miles under sugarcane and garden crops this is practically all rice land. Nearly 40 per cent. of the rice area, or 25 per cent. of the total area, can be watered in a normal year. There are nearly 3,000 tanks and about 4,000 wells, the latter being generally used for garden crops and sugarcane. Numerous tanks have been constructed by Government agency in the Baihar tahsil, and plans for much larger works to protect a large proportion of the District have been prepared.

Forests.

The Government forests cover an area of 972 square miles and are situated mainly on the hilly ranges of Baihar with blocks on the banks of the Wainganga and to the south-east. Teak grows in patches in the Sonawani and Paraswara ranges. The Baihar and Raigarh ranges contain pure sall forest of excellent quality, and sall mixed with other species, while the lowland blocks contain only inferior timber trees. Till recently the difficulties of transport have been too great to permit of any substantial revenue being obtained from timber, but the opening of the Satpura railway should greatly increase the sales. The forest revenue for 1903-04 amounted to Rs. 2,09,000 of which Rs. 1,00,000 were

obtained from sales of timber and Rs. 15,000 from grazing. Baladuar The large revenue from timber was principally due to a contract for the supply of sleepers. The principal minor products are lac and myrabolams. The zamindári estates contain 401 square miles of forest.

Deposits of iron ore occur in the Bhadrá, Kinhí and Minerale. Bhánpar ramíndáris. Iron is smelted by native workmen by indigenous methods, but the output is small. Manganese deposits have been found near Bálághát town, and are being worked by a European company. The outturn for 1904 was 10,828 tons, and about 300 labourers are employed. There are other numerous deposits of manganese ore which are as yet unworked. Copper ore exists in the hill of Melánjkundi. Mica is plentiful in the Baihar tahsíl, but the plates are not sufficiently large to be marketable. Bauxite, used for the manufacture of aluminium, is also found in the Baihar tahsíl. Gold is obtained by washing in the Son and Deo rivers.

The principal local industry is the weaving of course Aris and country cloth, the chief centres being Waris-soni and Lallaurra with the villages round them. Lallaurra dhot is are well known and are exported to the other Sitpari Districts and to Jubbulpore. Linga, Borgaon and Hatta also contain considerable colonies of weavers. In the Warisconi tract a number of Otaris make ornaments and vessels from lorass by moulding, while the Kasars of Warisconi and Hatta make ornaments of bell metal. Glass langles are manufactured at Lanji from imported Indian glass. At Baihar a variety of small tin vessels, such as lamps, sieves, betch loxes, and watering pots are made from empty kerosene cil-tins and sometimes sent to Mandla.

Rice and the pulse erad are the principal exports. The Commerce, former is sent principally to Berár and the latter to Bembay for the foreign trade. Tobacco is supplied to Chlustiegarh from the Bijägarh zamindári. Chi manufactured from the milk of both cows and buffaloer is exported from Baihar tabell. Of forest produce, teak is sent from the Sonáwáni and Cháregaon forests to Nägpur and Kamptee. Bambees are exported to Kamptee and Scool. Hidea and horns, myrabolams, Ise and gum are other forest products which are largely exported.

HALAGHAT DISTRICT. The leaves of the tendi tree (Diospyros tomentosa) are collected for the manufacture of leaf-plates and the outside covering of biris or native eigarettes. Mill-woven cloth is brought from Nagpur and Hingaughat, and small quantities of English cloth from Bombay. The salt used is golandázi or sea salt from Bombay. Gur or unrefined sugar comes from Mirzápur or from Mandlá, while refined sugar is chiefly the produce of Mauritius. Jourár, wheat and gram are received from the neighbouring Sátpurá Districts, the local supply being inadequate, and the pulse arhar is obtained from Berár. Brass vessels are imported from Mondlá, Bhandára, Jubbulpore and the United Provinces. The grain trade is principally in the hands of Marwari Banias. For timber, contracts are taken for Government and zamindari forests by Muhammadan merchants from Kamptee and Raipur.

Railways and Roads

The Satpura extension of the Bengal-Nagpur line from Gondia to Jubbulpore has recently been constructed, and passes through the west of the District up the valley of the Wainganga, with a length of 53 miles and six stations within its horders. The length of metalled roads in the District is 15 miles, and of unmetalled roads 208, and the annual expenditure, on maintenance is Rs. 39,000, all these roads being in charge of the Public Works department. Avenues exist only on 16 miles. The opening of the railway will naturally effect a material alteration in the existing trade routes.

Tamipo.

There are no reliable records of famine previous to 1868-69, in which year the rains ended abruptly a month before time, and the rice crop in the lowlands failed, leading to acute distress. A series of partial failures of the harvest was followed in 1896-97 by a more serious deficiency, the outturn of all crops taken together being only about 17 per cent. of normal. The numbers on relief rose to 08,000, or 15 per cent. of the population in May 1897, and the total expenditure was 13 lakhs. In 1899-1900 the rice crop again failed, the outturn being 23 per cent. of a hormal harvest. Relief was begun in September 1890 and continued till November 1900, the highest number on relief being 135,000, or 35 per cent. of the population in August, and the total expenditure amounting to 26 lakhs. During these famines most of the existing roads were constructed

and the embankment of the Satpura tailway was built. BALAGHAT Many tanks were made or repaired by famine loans in 1897 DISTRICT. and by grants to landowners in 1900.

The Deputy Commissioner is aided by one Assistant or District sub-Extra-Assistant Commissioner. For administrative pur-staff. poses the District is divided into two tabsils, each of which has a tahsildar and naib tahsildar. The Forest Officer usually belongs to the Imperial service, and for Public Works the District is included in the charge of the Executive Engineer, Bhandara Public Works Division.

The civil judicial slaff consists of a District and one Sub-Civil and The Divisional Criminal Jusordinate Judge, and a Munsiff at Bálághát. and Sessions Judge of the Nagpur Division has jurisdiction in Bálághát. Cattle-poisoning is a comparatively common form of offence.

The area now constituting Bálághát was formerly includ- Land Revenue ed in the Districts of Sconi and Bhandara and the land reve-administranue demand was assessed at the thirty years settlement of those Districts. These expired in 1896-98 when revision was commenced, but it was somewhat delayed by the famines. The revenue demand before revision was Rs. 1,26,000, and this was raised to Rs. 1,87,000, or by 48 per cent. The current settlement is for a period of 16 years, and will expire in 1914. The average incidence of revenue per acre at settlement was R. 0-9-11 (maximum R. 0-15-1, minimum R. 0-2-10), the corresponding figures of rental incidence being average R. 0-15-6 (maximum R. 1-11-11, minimum R. 0-2-7). In Baihar a summary settlement has been made for 7 years without rental enhancement to allow the tract to recover from the effects of famine. In certain areas temporary remissions . and abatements have been given. The collections of revenue in different years are shown below, in thousands of rupces:-

j*11 - 4	1880-81.	1890 91.	1900-01.	1903-04.
Land revenue	•	1,65	91	2,43
Total revenue	3,27	4,55	2,73	6,19

BALAGUAT DISTRIOT. Local Boards and Municipalities. The management of local affairs, outside municipal areas, is entrusted to a District council and three local boards, two for the Balaghat taked and one for Baihar. The income of the District council in 1903-04 was Rs. 35,000, while the expenditure on education was Rs. 12,000 and on civil works Rs. 9,000. Balaghat is a municipal town.

Police and Jails. The force under the District Superintendent of Police consists of 247 officers and men including 3 mounted constable, hesides 843 village watchmen for 1,076 inhabited towns and villages. The District has a District jail with accommodation for 59 prisoners including 6 females. The daily average number of prisoners in 1901 was 52.

Education.

In respect of education Bálághát stands 12th in the Province, 2.2 per cent. of the population (4.4 males and 1 females) being able to read and write. The percentage of children under instruction to those of school-going age is 10. Statistics of the number of pupils under instruction are as follows:—1880-51, 2,033; 1890-91, 2,597; 1900-01, 2,883; 1903-04, 4,663, including 55 girls. The educational institutions comprise an English middle school at Bálághát, three vernacular middle schools and 62 primary schools. There are girls' schools at Bálághát and Wárásconí, and a mixed school for girls and boys at Baihar supported by the Mission. The expenditure on education for 1903-04 was Rs. 17,000, of which Rs. 15,000 were provided from Provincial and local funds and Rs. 1,800 from fees.

Hospitals and Dispensaries. The District has 6 dispensaries, with accommodation for 28 in-patients. In 1904, 38,483 cases, of which 253 were of indoor patients, were treated and 560 operations were performed. The total expenditure was Rs. 6,800.

Vaccination.

Vaccination is compulsory in the municipal town of Bálághát only. The number of persons successfully vaccinated in 1903-04 was 31 per mille of the District population.

(J. R. Scott, Settlement Report, 1901. A District Gazetteer is being compiled.)

BALAGHAT TAUGU. Balaghat Tahsil (Burha)—The southern tahsil of Balaghat District, Central Provinces, lying between 215,19 and 22° 5′ N. and 79° 39′ and 80° 45′ E. In 1901, he area of the tahsil was 1,687 square miles, and its population

249,610 persons. In 1904 a redistribution of territory be- BALAGUAT tween the Bálághát and Baihar tahsíls took place, and the adjusted figures of area and population were 1,388 square miles and 239,141 persons. The population in 1891 of - the area now constituting the tabsil was 268,108. The tahsil contains one town Balagnar, the headquarters of the tabsil and District, population 6,223, and 582 inhabited villages. The density of population per square mile is 172 Persons. Excluding 308 square miles of Government forest 56 per cent. of the available area is occupied for cultivation. The land revenue demand in 1903-04 was Rs. 2,16,000 and that for cesses Rs 24,000. The tabsil consists of a rich lowland rice growing tract on both sides of the Wainganga river, and of a triangular block of hills to the north-east of the plain. It includes five complete zamíndári estates and parts of three The total area of these estates is 439 square miles, of which 267 square miles are under forest.

Baihar (Belir).—The northern talsil of the Bulughat Bainan. District, Central Provinces, situated between 21° 32' and 22° 24' N. and 80° 2' and 81° 3' E. In 1901 its area was 1,452 equate miles and population 76,911 persons. In 1904 a redistribution of territory between the Balaghat and Baihar tabells took place, and also a small interchange of area between the Baihar tahsíl and Mandlá District. The adjusted figures of area and population were 1,744 square miles and 86,230 persons. The population of the area now constituting the tabell in 1891 was 91,860. The density of population per square mile is 40 persons. The taheil contains 493 inhabited villages. Its headquarters are situated at Baihar, a village of 1,298 persons, 41 miles distant from Bálághát by road. Excluding 664 square miles of Government' forest, 26 per cent. of the available area is occupied for cultivation. The land revenue demand on the present area in 1903-04 was Rs 34,000 and that for cesses Rs. 4,000. The tabsil consists of a series of elevated plateaux divided and surrounded by and covered for the most part with forest. Large areas of whate land are fit for cultivation, and their colonisation on the rydtwari system is in progress. The tabell includes one whole zamindári estate and parts of three others, with a

BATHAR.

total area of 434 square miles, of which 132 square miles are under forest.

BALAGUAT

Balaghat Town.—The headquarters town of the Dalaghat tansil and District, Central Provinces, situated in Population (1901) 6,223. 21° 49' N. and 80° 12' E. When the District of Bálághát was constituted in 1567, the small village of Burha was selected as its headquarters, and the name has now been officially changed to correspond with that of the District, which means above the passes. So far as the town is concerned, however, the name is a misnomer as it lies below the hills. Balaghat is a station on the new Satpura narrow-gauge line, 25 miles from Gondia junction and 626 from; Bombay. It is situated two miles from the Wainganga river, and between the town and river lie about 1,200 acres of small forest through which roads have been laid out, while a large tank has been built on the ortskirts of the town. Balaghat was created a municipality in 1977, and the average municipal receipts during the decade ending 1901 were Rs. 5,000. In 1909-01 they were Rs. 7,000, the chief source of income being a house-tax. manganese mine is now being worked near the town. Balaghat has a certain amount of trade, but no manufactures. It contains an English middle school, a girls' school, and a dispensary.
